

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

POPULATION.

ANALYSIS OF RETURNS.

Form of Schedule—Method of Tabulation—Total Population—Former Censuses and Estimates—Comparison with Population of other Countries—Density—Center of Population—Distribution of Population—Classification of Population by Birthplace, Color, Sex, and Conjugal Condition—Literacy—School Attendance—Occupations.

The schedule for the enumeration of the Christian or civilized population of the Philippines resembles closely those of the censuses of Cuba and Porto Rico, the difference consisting of the omission, in the Philippine schedule, of questions relating to water supply and disposal of garbage and excreta, and the addition of questions as to tribe, ownership, and character of homes, and whether the person enumerated was insane, deaf, dumb, or blind. As compared with the schedules of the Twelfth Census of the United States, those of the Philippine census are somewhat simpler, the differences being due mainly to the more homogeneous character of the population of the Philippine Islands.

The schedule used in the enumeration or estimation of the wild people of the islands is very much simpler. It does not call for the enumeration of individuals, but taking a *ranchería*, or village, as a whole, asks the total number of inhabitants of each sex, and also the number over and under 15 years of age. On the same schedule questions are asked concerning births, deaths, schools, agriculture, and other industries.

The population schedule used for the enumeration of the Christian or civilized population, and the schedule used for the wild tribes, translated into English and reduced in size, are as follows:

Census of the Philippine Islands taken under the direction of the United States Philippine Commission.

Supervisor's district, No. —.
 Enumeration district, No. —.
 Municipality —; barrio, —

PUEBLO OR RAN- CHERIA.	INHABITANTS.										SCHOOLS.					AGRICULTURE.										OTHER INDUSTRIAL PRODUCTS.										
	Of more than 15 years of age.		Under 15 years of age.		Total.		Deaths in 1902.		Total number.		Teach- ers.		Pupils.		What is the ap- prox- imate av- erage of the in- habitants who can read and write?		Products cultivated.					Number of domestic animals.														
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32					

NOTICE.—When it is not possible to answer a question even approximately, write "Ign." instead of "Ignorado." The box headings of columns 18 to 32 have been left blank and should be filled out in accordance with the information collected. There should only be written down the products cultivated or harvested, such as hemp, tobacco, copra, vegetables, gutta-percha, etc. The names of these should be written in the box headings, and the quantities cultivated and harvested during the year 1902 should be written down in the columns underneath the numbers indicating the columns. If there are more products than the number of columns of the box headings, should be on an extra piece of paper and write down on this the quantities of the latter. The same method should be observed in connection with domestic animals, such as carabao, horses, sheep, cattle, fowls, etc. In columns 28 to 32 write down any other industries of the pueblo, such as pottery, textiles, cutlery, mats, hats, etc., and take notice of the instructions regarding agriculture and domestic animals given above.

METHOD OF TABULATION.

The tables required to present fully the information obtained from these schedules in many cases are necessarily quite complex, and would not be practicable by any method of hand tabulation without a great amount of labor and expense. Therefore the system of electrical tabulation employed in connection with United States census statistics was utilized. The operations involved in this method of tabulation are as follows:

All the necessary data relating to each person enumerated were expressed by means of holes punched in what is called a "keyboard punch card," of which the diagram on the opposite page is a correct illustration.

The figures and letters indicated on the card correspond to the data given in the schedules, and this data was expressed by means of the punched holes. For example, if the record related to a white person, B—standing for blanco (white)—was punched, while N was punched for negro, Mx for mixed, etc. For males, V was punched, and H for females. The age was recorded by punching 1, 2, 3, or 4 for the respective years, 5 for the group 5-9, etc.; for infants under 1 year one of the symbols M0 to M9 was used, thus recording the age in detail by months. In the next field or division of the card conjugal condition was recorded. In still another, birthplace was recorded by punching Jp for Japan, Es for Spain, Ot for "other countries." In the field FN, F (foreign) was punched for each person not a native, and N for a person born in the Philippine Islands. In the latter case a symbol representing the name of the tribe was punched in the adjoining field. For each occupation three holes were punched according to the number assigned to the given occupation in the corresponding classification of occupations. Citizenship, education, literacy, school attendance, size of family, etc., were similarly recorded by punching in the respective divisions of the card.

At the extreme left a space of 4 rows of 12 holes was used to record the province, island, municipality, and enumeration district to which the card related. This combination of holes would, of course, be the same for all the cards of a given district, thus making it possible to punch these items in a large number of cards at the same time; this was done by means of the "gang punch."

In addition, each card was provided with a double number, one number indicating the sheet of the particular enumeration district on which the record of the corresponding person could be found, and the other indicating the particular line or person to which the card related. By means of the gang-punched holes and these numbers any one of approximately 7,000,000 cards corresponding to the population of the

Philippines could be identified and the correctness of the punching verified.

The punched cards were passed through the Hollerith automatic electric tabulating machines. In this machine a series of electro-magnetically operated counters are arranged, according to the tables it is desired to compile, in electric connection with a circuit-closing device, the circuits through which are controlled by the holes in the punched record card.

By tabulating in this manner first one group of data and then another, with intermediate sorting by means of automatic sorting machines and arrangement of the cards, the various tables were obtained.

SUMMARY OF STATISTICS.

The following table presents in summary form the principal statistics concerning population:

Summary.

Total population	7,635,426	Birthplace—Continued.	
Civilized	6,987,686	France	121
Wild	647,740	Males	105
Sex:		Females	16
Civilized population	6,987,686	Other Europe	487
Males	3,496,652	Males	344
Females	3,491,034	Females	143
Birthplace:		Other countries	84
Philippine Islands	6,931,548	Males	64
Males	3,443,816	Females	20
Females	3,487,732	Color:	
China	41,035	Brown	6,914,880
Males	40,518	Males	3,435,848
Females	517	Females	3,479,032
Japan	921	Mixed	15,419
Males	475	Males	7,516
Females	446	Females	7,903
East Indies	241	Yellow	42,097
Males	211	Males	41,071
Females	30	Females	1,026

TOTAL POPULATION.

The total population of the Philippine archipelago on March 2, 1903, was 7,635,426. Of this number, 6,987,686 enjoyed a considerable degree of civilization, while the remainder, 647,740, consisted of wild people.

The civilized people, with the exception of those of foreign birth, were practically all adherents of the Catholic Church, while of the peoples here classified as wild, a large proportion, probably more than two-fifths, were Mohammedans in religion and were well known in the islands as Moros. The remaining three-fifths belonged to various tribes differing from one another in degrees of barbarism.

With the exception of the Tagalogs and the people of foreign birth, all the inhabitants of these islands are of the race of Malays.

These people were, at the time of the census, distributed in 30 civil provinces; the subprovinces of Marinduque and Masbate were given separately, though a part of them were under the control of a commandancia, and 1 city—Manila. There were scattered throughout the islands.

The following table shows, for provinces and commandancias, the total population and its broken down by the civilized and wild people:

Province or Commandancia.	Civilized.	Wild.
Cebu.....	1,030,000	1,030,000
Iloilo.....	1,030,000	1,030,000
Pangasinan.....	1,030,000	1,030,000

¹ Exclusive of subprovince of Marinduque.

² Commandancia.

³ Subprovince of Tayabas.

TOTAL POPULATION
DISTRIBUTED AMONG THE CIVILIZED AND THE WILD TRIBES

CIVILIZED TRIBES

WILD TRIBES

The most populous province was Cebú, with 653,727 inhabitants. The next largest were Iloílo, with 410,315; Pangasinán, with 397,902; Leyte, with 388,922; and Negros Occidental, with 308,272 inhabitants. There were 10 provinces with population in excess of 200,000, but less than 300,000 people. Between 100,000 and 200,000 there were 16, and 19 with fewer than 100,000 inhabitants each.

FORMER CENSUSES AND ESTIMATES.

The earliest estimate of the population of the Philippine Islands was made by Dr. D. P. Barrows, chief of the Bureau of non-Christian Tribes, and is published in his special report in Volume I of this report. This estimate refers to the time of the conquest of the islands by Legaspi, about 1570, and the figures can only be regarded as approximate, for it was impossible at that time to know much, if anything at all definite, about them. This gives the total number of people at about half a million.

A second estimate was made by Doctor Barrows, for the year 1591, which was based upon the number of tributes comprised in the *encomiendas*. There were counted 166,903 tributes, each of which, it was estimated, represented four persons, giving a total population of 667,612. This was the only estimate based upon *encomiendas*, as the system ceased in 1600.

From very early times the various religious orders of the Catholic Church were established in the islands, and the people were distributed among them into parishes. Each friar enumerated the people of his parish and kept a close record of births, marriages, and deaths, or rather of baptisms, marriages, and burials. By adding up the figures for the several parishes, and for the several orders, of which there were 5 established in the islands, a close approximation to the civilized or Christian population could have been had at any time. At present, however, a great part of these records has been lost so that, with the exception of the year 1735, we have no figures derived from this source until 1799. But there are figures extant derived from this source for many years during the nineteenth century. The figures published in the *Guía Oficial* are commonly derived from the church records, and the estimates made by various writers, Buzeta, Zúñiga, Arenas, and Algué are presumably also based upon them. In 1877 and in 1887 civil censuses of the islands were taken by Spanish authority, and in 1896 such a census was commenced and partly carried through. The records of this census, which were found in mutilated condition in Manila, were tabulated by Professor Plehn, and they form the basis of his estimate of the population for that year.

Still another source of information concerning the population is in the number of *cédulas* sold. A *cédula* is a per capita tax which is

obligatory upon all males between certain ages. The number of such cédulas multiplied by an arbitrary factor is presumed to give an approximation to the population.

In the following table are brought together all the statements of population which have been discovered. In nearly all cases these are confined to the civilized people.

YEAR.	Popula- tion.	Authority.	Remarks.
1903.....	6,987,686	Census	Not including wild peoples.
1899.....	6,703,311	Father Algué	
1898.....	9,703,311	Gb. Filip Repus.....

1877.....	5,233,507	Church	
1877.....	5,567,685	Civil census	Not including 602,853 infieles.
1876.....	5,501,356	Church	
1873.....	6,195,000	Siansianko	
1873.....	7,391,106	J. F. de Pau	Includes estimates of wild tribes.
1871.....	5,682,012	Guía Oficial	
1870.....	4,489,995	Cavada	
1870.....	4,712,006	Guía Oficial	
1870.....	4,698,477	Civil authorities	Not including 393,300 infieles.
1864.....	7,291,314	Jäger	Probably includes infieles, greatly overestimated.
1862.....	4,734,533	Church	
1858.....	4,290,381	Bowring	
1850.....	3,857,424	Buzeta	
1848.....	3,745,603	Arenas	
1845.....	3,434,007	Buzeta	
1840.....	3,095,761	Guía Oficial	
1840.....	3,096,031	Local officials	
1840.....	3,209,077	Guía de España	Including 113,000 infieles.
1833.....	3,153,290	Church	
1829.....	2,593,287	Church	
1819.....	2,106,230	Cédulas	
1818.....	2,106,836	Cédulas	
1818.....	2,026,230	Buzeta, from cédulas	
1817.....	2,062,805	Cédulas	
1815.....	2,052,994	Cédulas	
1812.....	1,933,331	Cédulas	
1810.....	2,526,406	Comyn	
1808.....	1,741,234	Cédulas	
1800.....	1,561,251	Zañiga	
1799.....	1,522,224	Cédulas	
1799.....	1,502,574	Buzeta	
1791.....	1,649,678		
1789.....	418,718	Felipe V.	
1755.....	837,182	Church	
1591.....	667,612	Encomiendas	

Of the above statements many are unworthy of consideration, in some cases because estimates of the wild people have been included and in other cases because, for some unknown reason, the population of certain provinces, or of the islands as a whole, is plainly too large or too small to be possible. By plotting these figures upon profile paper and accepting the figures given by the two Spanish censuses and the present census, one gets certain datum points from which to

work. He is aided in his selection of probable results furthermore by the relations between the recorded numbers of births and deaths in the islands when such records are available. We have such records partially complete for the years between 1885 and 1898, from which the birth and death rates have been derived, as is set forth in the volume on mortality. From this it appears that in normal years—that is, years free from epidemics of disease—the excess of births over deaths averaged about 17 per thousand per year, and that the maximum excess during this period, which took place in the year 1887, was 28 per thousand per year. We should naturally look, therefore, for an average increase of the population, except in times of epidemic, of about 17 per thousand per year, and should look with suspicion, at least, upon a rate of increase which exceeded 28 per thousand. These facts furnish additional data for criticism of the above statements of population and for the elimination of such as appear to be improbable.

Using these data, the following statements of population have been selected as those most probably correct between 1799 and 1903. In the following table the population is given, and in the last column the average annual rate of increase from one date to the next:

YEAR.	Population.	Authority.	Per cent of annual increase.
1903.....	6,987,686	Census	1.2
1899.....	6,703,311	Father Algué.....	0.7
1894.....	6,490,584	Church.....	2.5
1893.....	6,333,584	Guía Oficial.....	1.8
1891.....	6,252,957	Guía Oficial.....	1.1
1887.....	5,984,727	Census	1.2
1885.....	5,839,383	Church.....	1.0
1879.....	5,487,218	Guía Oficial.....	0.9
1877.....	5,567,685	Census	1.6
1876.....	5,501,356	Church.....	2.6
1870.....	4,712,006	Guía Oficial.....	0.8
1858.....	4,290,381	Bowring.....	1.8
1850.....	3,857,424	Buzeta.....	1.5
1848.....	3,745,603	Arenas.....	2.9
1845.....	3,434,007	Buzeta.....	2.1
1840.....	3,096,031	Local officials.....	1.6
1829.....	2,593,287	Church.....	2.1
1819.....	2,106,230	Cédulas.....	2.1
1817.....	2,062,805	Cédulas.....	0.2
1815.....	2,052,994	Cédulas.....	2.0
1812.....	1,933,331	Cédulas.....	2.6
1808.....	1,741,234	Cédulas.....	1.4
1800.....	1,561,251	Zóñiga.....	3.9
1799.....	1,502,574	Buzeta.....	

In considering this table it must be remembered that in 1902 there was a serious epidemic of cholera which sent the death rate up to double the birth rate. There were other epidemics of the same disease in 1889, in 1882, in 1879, in 1862, and in 1820. That of 1879 raised the death rate to 106 per thousand, with a birth rate of only 43, and resulted in making the population in 1879, 100,000 less than in 1877. There were doubtless other years in which epidemics prevailed, but no record of them has been found.

The average rate of increase of the population from 1800 to 1903 was 1.5 per cent per year, a rate less than that of the United States at present, which is 2 per cent a year, and far less than the average of the United States during the past century, which was 2.7 per cent per year.

COMPARISON WITH FORMER CENSUSES, BY PROVINCES.

The following table shows the Christian population, by provinces, by the three censuses of 1903, 1887, and 1876. As far as possible the population is given for the areas which form the present provinces.

The final columns show the proportional gain in population between these censuses.

PROVINCE.	1903	1887	1876	PER CENT OF GAIN.	
				1887 to 1903	1876 to 1887
Abra.....	37,823	41,318	28,192	Loss.	47
Albay.....	239,434	206,689	1259,025	16	13
Ambos Camarines.....	233,472	194,022	186,196	20	4
Antique.....	131,245	115,434	108,241	14	7
Bataan.....	45,166	50,781	50,979	Loss.	Loss.
Batangas.....	257,715	311,180	331,874	Loss.	Loss.

Pampanga.....	222,656	223,902	207,916	Loss.	Loss.
Pangasinán.....	394,516	302,181	269,252	8	8
Paragua.....	27,493	30,276	16,403	31	12
Rizal.....	148,502	188,434	191,859	Loss.	85
Romblón.....	52,848	34,828	31,024	Loss.	Loss.
Samar.....	265,549	184,386	180,190	52	12
Sorsogón.....	120,454	87,090		44	2
Surigao.....	99,298	67,760	58,995	38	
Tarlac.....	133,513	89,439	92,196	47	15
Tayabas.....	150,262	121,078	121,331	49	Loss.
Zambales.....	101,381	87,275	90,691	24	Loss.

¹Sorsogón included with Albay in 1876.

²Includes some wild people.

Between 1887 and 1903 it will be seen that most of the provinces of central Luzón and those in the interior of northern Luzón and Ilocos Sur lost population. The two provinces in the Cagayán valley, Isa-

bela and Cagayán, together with Pangasinán and Tárlac, in the great valley of Luzón, gained at a rapid rate, as did also nearly all the provinces of southern Luzón. As a whole, the Visayan Islands gained heavily, although the province of Iloilo lost, and the other two provinces of the island of Panay made comparatively small gains. In northern Mindanao the two provinces of Misamis and Surigao gained. Between 1887 and 1903, 13 provinces lost population, as was also the case between 1876 and 1887. In seven cases the same province lost population in both intervals of time. Four of these, Bataán, Batangas, Bulacán, and Rizal, are in the immediate neighborhood of Manila, as is Cavite, which province made but a trifling gain. This suggests a drain of population from these neighboring provinces to the city.

The following table gives the number of municipalities which gained or lost population between 1887 and 1903. Those in the unknown column are those that did not exist in 1887 or could not be identified:

PROVINCE OR COMANDANCIA.	Gained.	Lost.	Unknown.
Philippine Islands.....	579	281	102
Abra.....	5	7	
Albay.....	20	4	3
Ambos Camarines.....	27	10	2
Antique.....	14	4	2
Bataán.....	10	2	
Batangas.....	7	15	
Bohol.....	29	3	3
Bulacán.....	8	17	
Cagayán.....	13	11	6
Cápiz.....	22	11	1
Cavite.....	13	10	
Cebu.....	44	9	4
Dapitan.....	3		1
Davao.....	4		2
Ilocos Norte.....	10	5	
Ilocos Sur.....	11	12	1
Iloilo.....	15	29	7
Isabela.....	10	3	2
La Laguna.....	4	24	2
La Unión.....	12	3	
Leyte.....	41	2	8
Marinduque.....	5		
Masbate.....	11	2	4
Mindoro.....	9	3	
Misamis.....	19	5	1
Negros Occidental.....	24		10
Negros Oriental.....	16	2	6
Nueva Ecija.....	7	11	5
Nueva Vizcaya.....	3	3	
Pampanga.....	11	12	
Pangasinán.....	24	9	4
Paragua.....	2		3
Paragua Sur.....		1	
Rizal.....	3	28	1
Romblón.....	6	3	2
Samar.....	35	2	6
Siasi.....	1		
Sorsogón.....	13	1	1
Surigao.....	19	5	10
Tárlac.....	14	3	
Tayabas.....	18	4	3
Zambales.....	17	6	2

It appears that of the total number of municipalities here considered, six-tenths gained in population, three-tenths lost, while the other

tenth, for one reason or another, could not be found. In 9 provinces losses were recorded in a majority of the municipalities. In Batangas and Bulacán more than two-thirds of them lost; in Iloilo, nearly two-thirds; in Rizal, all but three of the identified municipalities lost, and in La Laguna all but four.

On the other hand, in 32 provinces the majority of the municipalities gained in population. In Dapitan, Dávao, Marinduque, and Negros Occidental all the municipalities which were identified gained, while in 23 others two-thirds or more made gains.

COMPARISON WITH OTHER COUNTRIES.

The people of the Malay race constitute most of the inhabitants of the Malay peninsula, Java, Sumatra, Borneo, Celebes, and other associated islands, together with the Philippines. The total number of Malays is somewhere in the neighborhood of 40,000,000, of which over 28,000,000, or three-fourths, are found in Java, most of the remainder being in the Philippine Islands.

The increase and distribution of this race on the island of Java are of interest, in comparison with similar figures for the Philippines, and comparisons will be made with them in this report, so far as figures can be obtained. The following table gives the population of Java at different intervals since the latter part of the eighteenth century, together with the annual rate of increase:

YEAR.	Population.	Authority.	Per cent of annual increase.
1781.....	2,021,915	Radermacher	
1795.....	3,500,000	Nederburg	4.0
1810.....	3,770,000	Duendels.....	0.5
1815.....	4,615,270	Census	4.1
1845.....	9,542,045	Bleeker.....	2.4
1868.....	15,477,329		3.8
1872.....	17,291,200	Census	2.8
1877.....	18,807,320		1.7
1878.....	19,067,829		1.4
1880.....	19,794,505		1.9
1891.....	23,912,564		1.7
1897.....	26,125,110		1.5
1900.....	28,745,698	Census.....	3.2

The diagram on page 23 compares graphically the growth of Java and the Philippines in population. At the beginning of the century Java had a little more than double the population of the Philippine archipelago. At the end of the century it had four times as many people.

The rate of increase from the beginning to the end of the above record of Java's growth was 2.1 per cent. From 1845 to 1900 it was 2 per cent, and from 1872 to 1900 1.8 per cent. The figures show, as is natural, a diminishing rate of increase as the population has become denser. Throughout, however, the rate of increase was considerably

RELATIVE RAPIDITY OF GROWTH OF POPULATION IN JAVA AND THE PHILIPPINES.

greater than that of the Malays in the Philippine Islands. The cause of this is not easy to determine. So far as known the people of Java have been quite as subject to epidemics and diseases as the people of the Philippines, and there is no apparent reason for the more rapid growth.

The following table, derived almost entirely from the Statesman's Year Book for 1903, gives for comparison the population of a number of countries at periods differing in most cases by about fifty years, and the average annual rate of increase derived therefrom:

Population and average rates of increase.

COUNTRY.	Year.	Population.	Year.	Population.	Per cent of annual increase.
United States	1850	23,191,876	1900	75,994,575	2.4
Russia	1851	62,086,000	1897	112,920,053	1.3
Japan	1894	41,813,215	1899	44,260,604	1.2
Philippines	1850	3,857,424	1903	6,987,686	1.1
Denmark	1850	1,407,747	1900	2,447,441	1.1
Netherlands	1849	3,056,879	1899	5,104,137	1.0
Portugal	1854	3,499,121	1900	5,428,800	1.0
Norway	1845	1,328,471	1901	2,231,395	0.9
Germany	1850	35,397,000	1900	56,367,178	0.9
Belgium	1846	4,337,196	1900	6,815,054	0.9
United Kingdom	1851	27,368,736	1901	41,454,262	0.8
Sweden	1850	3,482,841	1900	5,136,441	0.8
Austria	1850	17,534,950	1900	26,107,304	0.8
Hungary	1850	13,191,563	1900	19,254,559	0.8
Switzerland	1850	2,392,740	1900	3,327,207	0.7
Italy	1852	24,347,806	1901	32,475,253	0.6
Spain	1860	15,673,536	1897	18,129,265	0.4
British India	1891	221,173,677	1900	229,742,518	0.4
France	1851	34,930,000	1901	38,595,430	0.2

From this it appears that the average annual rate of increase of the Philippines in the last half century has exceeded that of all these other countries, with the exception of the United States, Russia, and Japan, and equaled that of Denmark. It was nearly three times as large as that of British India and Spain, nearly six times as large as that of France, and yet it was less than half as great as that of the United States.

DENSITY OF POPULATION.

The density of population of the islands as a whole was 67 per square mile; that of Java was not less than 553, or more than eight times as great; that of the main body of the United States was 26; and that of the state of Indiana, which most nearly approached that of the Philippines, was 70 per square mile.

The most densely populated of the provinces, Ilocos Sur, had 398 inhabitants to a square mile. This was slightly exceeded by Rhode Island among the states, with 407, but in turn it exceeded Massachusetts, the second most densely populated, which had 349. Near this state in density were Cebú, with 337, and Pangasinán with 334 to a square mile. These 3 were the only provinces with more than 300 inhabitants to a square mile.

AREAS OF PROVINCES AND COMANDANCIAS.

TOTAL POPULATION OF PROVINCES AND COMANDANCIAS.

DENSITY OF POPULATION OF PROVINCES AND COMANDANCIAS.

There were 7 provinces and 1 comandancia with between 200 and 300 inhabitants to a square mile, as contrasted with only 1 State in the United States. There were 11 provinces with a density ranging between 100 and 200, while in the United States there were but 5 states within these degrees of density. With density of population from 10 to 100 there were in the Philippines 25 provinces or comandancias, while there were 27 states in the United States. With a density less than 10 there were in the Philippines only 2 comandancias, and in the United States no fewer than 15 states.

The following table shows the area, the total population, including both Christian and wild, and the number of inhabitants to a square mile, for provinces and comandancias:

PROVINCE OR COMANDANCIA.	Area in square miles.	Total population.	Population per square mile.
Ilocos Sur	471	187,411	396
Cebu	1,939	653,727	337
Pangasinán	1,193	397,902	334

Jamaica.....	143	Paraguay.....	7
Korea.....	142	Peru.....	6
Servia.....	136	Venezuela.....	4
Ceylon.....	119		

POPULATION AND DENSITY OF ISLANDS.

The population of 342 islands, including nearly all those which contained inhabitants, was returned separately. Of these Luzón is the largest, with an area of more than 35 per cent of the whole archipelago and a population almost exactly one-half that of all. Mindanao, the second in rank, has an area of 31 per cent of that of the archipelago, while its population was only 7 per cent. These two islands together contain two-thirds of the area and 56 per cent of all the people.

The islands which have areas between 1,000 and 10,000 square miles each are 9 in number, and include Bohol, Cebú, Leyte, Masbate, Mindoro, Negros, Panay, Paragua, and Sámar. Their combined area is 26 per cent and their combined population 35 per cent of that of the archipelago. The islands having areas between 100 and 1,000 square miles each number 20, with a combined area of 6 per cent and a combined population of 5 per cent of that of the archipelago. Those between 10 and 100 square miles each number 56. Their combined area is 1 per cent and the population 3 per cent of that of the archipelago, while there are many islands which form no appreciable part of the area, and whose population was 1 per cent of the total.

Thus of the area of the archipelago, 99 per cent is comprised in islands exceeding 100 square miles each, and of the population 96 per cent is included in these islands.

The density of population in the two largest islands collectively was 56 per square mile. That of the second group of islands, namely, those between 1,000 and 10,000 square miles each, was 91 per square mile; this included the densely settled islands of Panay and Cebú.

The density of the third group, which comprised the islands between 100 and 1,000 square miles each, was 63 per square mile, which was much less than that of the preceding group. That of the fourth group, that is, the islands between 10 and 100 square miles each, was 127, and that of the fifth, or smallest group, 238. Thus it appears that with one exception—that of the third group—the density increased as the size of the island diminished. This is due to the fact that the population in large part was a seaboard population, no less than 65 per cent of it living in municipalities bordering on the coast. This being the case, it follows that the number of inhabitants upon an island is a function not of its area but rather of the extent of its coast line. Perhaps a fairer measure of the density of the population throughout a large part of the archipelago at least would be to divide the population by the length of the coast line.

In the following table are given the area, total population, and density of 44 islands, selected either because of their area or population:

ISLAND.	Province or comandancia.	Area in square miles.	Total population.	Density.
Laguán.....	Samar.....	10	8,386	839
Mactán.....	Cebu.....	25	17,540	702

AREAS OF PRINCIPAL ISLANDS.

TOTAL POPULATION OF PRINCIPAL ISLANDS.

DENSITY OF POPULATION OF PRINCIPAL ISLANDS.

CENTER OF POPULATION.

The center of population, by which expression is meant the center of gravity of all the inhabitants, distributed as they were at the time of the census, was in latitude $12^{\circ} 50'$ and longitude $122^{\circ} 20'$. This point is in the sea, 15 miles a little east of north of the north point of Romblón Island. If the archipelago be regarded as a plane surface, without weight and loaded with its inhabitants, each person being assumed to have the same weight and to press downward with a force proportional to its distance from this center, the structure thus created would balance about this point.

POPULATION OF COAST AND INTERIOR REGIONS.

Using the municipality as a unit, the population has been classified in two parts, that living in municipalities bordering upon the seacoast and that in municipalities lying back from the coast. Under these classifications it is found that nearly two-thirds of the Christian population, 65 per cent, lived on or near the seacoast, and 35 per cent lived inland.

The following table shows the proportions of the civilized people of each province in each of these two groups, expressed in percentages of the total Christian population of that province:

PROVINCE.	PER CENT.		PROVINCE.	PER CENT.	
	Coast.	Inland.		Coast.	Inland.
Abra.	0	100	Manila city	100	0
Albay	74	36	Marinduque	100	0
Ambos Camarines	54	46	Masbate	100	0
Antique	84	16	Mindoro	100	0
Bataan	100	0	Misamis	100	0
Batangas	58	42	Negros Occidental	81	19
Benguet	0	100	Negros Oriental	100	0
Bohol	79	21	Nueva Ecija	0	100
Bulacán	36	64	Nueva Vizcaya	0	100
Cagayán	34	66	Pampanga	18	82
Cápiz	61	39	Pangasinán	22	78
Cavite	48	52	Paragua	100	0
Cebu	100	0	Rizal	19	81
Ilocos Norte	53	47	Romblón	100	0
Ilocos Sur	92	8	Samar	94	6
Iloilo	52	48	Sorsogón	93	7
Isabela	0	100	Surigao	95	5
La Laguna	0	100	Tárlac	0	100
La Unión	85	15	Tayabas	83	17
Lepanto-Bontoc	0	100	Zambales	87	13
Leyte	84	16			

Of that portion of the Christian population which lived inland, far the larger part was found on the island of Luzón. On that island it appears that more than half the people, 53 per cent, lived inland. These were mainly in the great valley of Luzón and in the valley of the Río Grande de Cagayán. Indeed, leaving Luzón out of consideration, and considering only the rest of the archipelago, it appears that 86 per cent lived upon the coast and 14 per cent in the interior.

The distribution of the various tribes, as regards coast and interior, seems to be mainly a question of habitat. The following table shows, for the eight civilized tribes, the proportions of the people living on the coast and inland:

TRIBE.	PER CENT.		TRIBE.	PER CENT.	
	Coast.	Inland.		Coast.	Inland.
Zambalan	87	13	Tagalog	51	49
Visayan	85	15	Cagayan	23	77
Bicol	66	34	Pangasinan	21	79
Ilocano	64	36	Pampangan	16	84

The large proportion of Zambalans on the coast is doubtless due to the fact that their range is limited to a narrow strip of coast, backed by a high range of mountains. Most of the Visayans live on mountainous islands, with narrow strips of cultivable land along the coast. Such is the case in Negros, Cebú, and Leyte, and in Antique, on Panay. The Bicolos have much level hemp land in the interior of Luzón, over which they have spread. The Ilocanos have densely populated the narrow coast strip of northwestern Luzón, and have also penetrated the mountain valleys of the Cordillera Central. The Cagayanes are found mainly inland, covering the valley of the Cagayán river, while the Pangasinanes and the Pampangans inhabit the broad valley of central Luzón, the former reaching the coast only at the head of Lingayén gulf, the latter on Manila bay.

CLASSIFICATION OF BARRIOS BY POPULATION.

There are in the Philippine Islands about 13,400 barrios, which may be regarded as the equivalent of villages. In estimating this number, those barrios which are closely adjacent to one another so that several of them form practically one village or town are added together; thus the 23 barrios of Cebú which are urban and are close together have been counted collectively as the city of Cebú. In a number of cases the población consists of a number of adjacent urban barrios, and these have been added together to form the village or town, to which is given the name of the municipality.

In the following discussion the city of Manila is omitted, as it is so far out of the class of the groups of population here considered that its addition would vitiate the results. There are also omitted the villages of wild tribes, those of the provinces of Benguet and Lepanto-Bontoc, and of the comandancias of Basilan, Cottabato, Joló, Paragua Sur, Siassi, Tawi Tawi, and Zamboanga, because the number of them is small, and because many were inhabited by wild people with only a slight sprinkling of civilized natives, and their inclusion would tend to give a false impression regarding the size of the barrios.

With the omissions above enumerated, the average size of the barrio or village in the Philippine Islands was 500 people. The average size of the barrio in different provinces ranged widely, as shown in the following table, giving the number of barrios in each province and the average population of the barrio:

PROVINCE OR COMAN- DANCIA.	Number of barrios.	Average population.	PROVINCE OR COMAN- DANCIA.	Number of barrios.	Average population.
Surigao.....	113	879	Paragua.....	57	482
Nueva Ecija.....	160	831	Ambos Camarines.....	535	436
Bataan.....	56	807	Batangas.....	591	436
Nueva Vizcaya.....	21	763	Cápiz.....	535	421
Rizal.....	197	754	Negros Oriental.....	441	419
Cavite.....	185	729	Marinduque.....	124	417
Albay.....	329	728	Iloilo.....	978	413
Pangasinán.....	564	700	Romblón.....	136	389
Misamis.....	195	695	La Laguna.....	393	378
Leyte.....	579	672	Cagayán.....	385	371
Tarlac.....	201	664	Antique.....	358	367
Cebu.....	1,004	651	Mindoro.....	93	348
Ilocos Norte.....	272	650	Isabela.....	207	332
Bulacán.....	353	633	Masbate.....	133	328
Pampanga.....	364	612	La Unión.....	411	311
Bohol.....	482	559	Abra.....	125	303
Sorsogón.....	217	555	Ilocos Sur.....	580	300
Zambales.....	194	523	Dávao.....	69	293
Negros Occidental.....	588	516	Tayabas.....	551	273
Samar.....	523	508	Dapitan.....	75	229

The smallest average village is found in the comandancia of Dapitan, with 229 inhabitants; the largest in Surigao, with 879. There does not appear to be any relation between the density of population of the different provinces and the average size of the village, nor does there appear to be any marked difference in gregariousness, as represented by the size of the barrio, among the different civilized tribes. The average Tagálog village was perhaps a little larger than those of the others, but this may be due to other causes.

The barrios of the archipelago have been distributed according to their population, as those having less than 200 inhabitants, 200 to 400, 400 to 600, and so on, up to those having the largest population. The number of barrios in each group and the population in each group have been obtained, and the results reduced to percentages of the total number of barrios and the total population. These appear in the table following:

PROPORTION OF THE TOTAL NUMBER OF VILLAGES IN THE ARCHIPELAGO
IN EACH GROUP.

GROUP OF BARRIOS.	ARCHIPELAGO.		GROUP OF BARRIOS.	ARCHIPELAGO.	
	Per cent of total number of barrios.	Per cent of total population.		Per cent of total number of barrios.	Per cent of total population.
Under 200	30.7	7.0	4,400-4,600	0.1	0.9
200-400	28.0	16.5	4,600-4,800	(1)	0.3

3,600-3,800	0.1	0.7	18,200-18,400	(1)	0.3
3,800-4,000	0.1	0.7	19,600-19,800	(1)	0.3
4,000-4,200	0.1	0.8	19,600-19,800	(1)	0.3
4,200-4,400	(1)	0.4			

¹ Represented; altogether they make 3.1 per cent.

From the first column of the above table it appears that nearly one-third of all the barrios contained less than 200 inhabitants each, and that nearly three-fifths contained less than 400 each, while the barrios which contained less than 600 inhabitants each formed nearly three-fourths of all the barrios in the archipelago.

From the last column of the above table it appears that less than one-fourth of the population was found in barrios of less than 400 inhabitants each, and about three-fifths in barrios of less than 1,000 inhabitants each. Four per cent of all the population was found in towns of over 5,000 inhabitants each, and over 10 per cent in towns of more than 3,000 inhabitants each.

There were but four towns in the archipelago which exceeded 10,000 inhabitants each, and 35 which exceeded 5,000. They are given in the following table:

TOWN.	Province.	Population.	TOWN.	Province.	Population.
Laosag	Ilocos Norte	19,699	Taytay	Rizal	5,840
Iloilo	Iloilo	19,054	Bulan	Sorsogón	5,831

PROPORTION OF THE POPULATION OF THE ARCHIPELAGO IN VILLAGES OF VARIOUS SIZES.

BIRTHPLACE.

The civilized population of the Philippine Islands is an extremely homogeneous one. Out of the civilized population of 6,987,686, no fewer than 6,931,548, or 99.2 per cent, were born in the Philippine Islands. In Java the proportion of natives, consisting almost entirely of Malays, was, in 1900, 98.4 per cent. The element of foreign birth in the Philippines, which constituted only eight-tenths of 1 per cent of the inhabitants, was composed mainly of Chinese, who numbered 41,035, and constituted six-tenths of 1 per cent. Besides them there were a few hundred Japanese and East Indians. Next to the Chinese the largest alien element in the Philippines was composed of those born in the United States, who numbered 8,135, and formed a little over one-tenth of 1 per cent, while all other nationalities collectively formed another tenth of 1 per cent.

Of the foreign born, whose total number was 56,138, no fewer than 29,491, or more than one-half, were in the city of Manila, the remainder being scattered in small numbers over the archipelago. What was true in regard to the distribution of the foreign born as a whole, was true also in regard to the principal nationalities. A little more than one-half of the Chinese, Americans, and Spaniards were found in Manila, the remainder being distributed over the archipelago. There were Chinese in nearly every province and comandancia. The same was true of Americans, with the exception of the comandancia of Dapitan, and of the Spaniards, with the exception of Nueva Vizcaya, Siassi, and Tawi Tawi.

The following table summarizes the distribution of the foreign born:

COUNTRY OF BIRTH.	Total.	In Manila.	In provinces.
Total.....	56,138	29,491	26,647
China.....	41,035	21,085	19,952
Japan.....	921	721	200
East Indies.....	241	128	113
United States.....	8,135	4,300	3,835
United Kingdom.....	667	418	249
Germany.....	368	265	103
Spain.....	3,888	2,065	1,823
France.....	121	92	29
All other.....	762	419	343

Of all the civil divisions of the islands, the city of Manila was the only one that contained a considerable proportion of persons of foreign birth. In that city only 86.6 per cent were native born, the remainder being born in foreign lands.

The following table shows, for each province and comandancia, first, the total number of municipalities, and in succeeding columns the number of municipalities which contained one or more persons born

in the United States, China, Spain, United Kingdom, and Germany, and in the last column the number which contained no foreign inhabitants, but were composed entirely of natives:

Number of municipalities containing persons of foreign birth.

PROVINCE OR COMANDANCIA.	Total number of municipalities.	NUMBER OF MUNICIPALITIES CONTAINING PERSONS BORN IN—					Number of municipalities with no foreign born.
		United States.	China.	Spain.	United Kingdom.	Germany.

Tárac.....	17	9	12	2			5
Tawi Tawi.....	1	1	1			1	
Tayabas.....	25	14	23	16	1	2	1
Zambales.....	25	14	18	9			3
Zamboanga.....	1	1	1	1	1	1	

It will be seen from the above that out of the total number of municipalities here considered—namely, 999—474, or nearly one-half, contained Americans in greater or less number; that 717 contained Chinese; 373 contained Spaniards; 74 contained British; 53, Germans; and that 184 municipalities, or less than one-fifth of the total number, were entirely without foreign born inhabitants.

There were in the archipelago, outside of Manila, 3,835 Americans, who were scattered over 474 municipalities, the average American population in each municipality being 8. Similarly there were, outside of Manila, 19,952 Chinese in 717 municipalities, an average of 28 to a municipality. There were 1,823 Spaniards in 373 municipalities; 249 English in 74 municipalities, and 103 Germans in 53 municipalities. It will be seen from these statements and from the above table how widely scattered was the foreign element outside of Manila.

COLOR.

With respect to color the people of the Philippine Islands showed very nearly as great homogeneity as with respect to birthplace. Ninety-nine per cent of the Christian population belonged to the brown race. Only two-tenths of 1 per cent were reported as being of mixed color. This statement, however, may fairly be questioned, as there is little doubt that the proportion of mixture of races was much greater. The mixture is that of the brown people with the Chinese, Spaniards, and, in recent years, to a trifling extent with Americans. Much of this mixture, however, dates back to past generations, and it is presumable that the present inhabitants have no knowledge of their ancestors. The yellow race included the Chinese and Japanese, and constituted about six-tenths of 1 per cent; the whites, two-tenths of 1 per cent; besides these there were a few negroes in the islands, discharged soldiers of negro regiments.

Excepting the military comandancias and the wild tribe provinces, where the civilized population was very small, and the city of Manila, which had a large foreign population, the brown people constituted in every case 99 per cent or more of the population, excepting in Sorsogón and Isabela. In some provinces the population was very pure; thus, in Bohol and Abra only 13 out of every 10,000 were other than brown, and in more than one-half of the civil provinces the people other than brown numbered less than 50 to each 10,000 population.

Of the population of the city of Manila five-sixths were brown, one-tenth yellow, only one-thirtieth white, and one-fiftieth mixed. With the exception of the comandancias and the sparsely populated wild tribe provinces, this subdivision of the archipelago contained by far the largest alien element, many times as great as anywhere else.

The following table shows the proportion of population by color, in the provinces and comandancias:

Classification of the population by color.

PROVINCE OR COMANDANCIA.	PER CENT.				
	Brown.	Mixed.	Yellow.	White.	Black.

CIVILIZED AND WILD TRIBES.

The following table shows the total Filipino population, civilized and wild, classified by tribes, with the percentage which the members of each tribe bear to the total Filipino population. The names of the wild peoples are in italics:

TRIBE.	Number.	Per cent.	TRIBE.	Number.	Percent.
Visayan	3,219,030	42.6	<i>Negrito</i>	23,511	0.3
Tagalog	1,460,695	19.3	<i>Mandaya</i>	21,642	0.3
Ilocano	803,942	10.6	<i>Manobo</i>	20,635	0.3
Bicol	566,365	7.5	<i>Bagobo</i>	12,149	0.2
Pangasinán	343,686	4.5	<i>Mangyan</i>	7,269	0.1
Pampangan	280,984	3.7	<i>Bilan</i>	6,756	0.1
<i>Moro</i>	277,547	3.7	<i>Tagbanúa</i>	4,696	0.1
<i>Igorot</i>	211,520	2.8	<i>Tiruray</i>	3,993	0.1
Cagayán	159,648	2.1	<i>Ilongot</i>	3,601	
<i>Bukidnon</i>	56,189	0.7	<i>Ata</i>	2,941	
Zambalan	48,823	0.6	<i>Tagabili</i>	900	
<i>Subanos</i>	25,768	0.3	<i>Batak</i>	586	

The largest tribe was the Visayan, numbering 42.6 per cent of all; next in number were the Tagálogs with 19.3 per cent; and the Ilocanos with 10.6 per cent. The most numerous of the wild people, the Moros, were exceeded in number by all of these, as well as by the Bícols, the Pangasinanes, and the Pampangans. The only civilized tribes which the Moros outnumbered were the Cagayanes and the Zambalans.

Of the wild tribes, the Igorots were, after the Moros, the most numerous; then there is a great jump to the Bukidnon; then follow the Subanos, the Negritos, the Mandayas, and Manobos, each containing not much more than a score of thousand.

Members of the eight civilized tribes formed 91 per cent of the Filipino population of the archipelago, and the members of the wild tribes 9 per cent. The civilized people were made up of eight tribes in the following proportions:

CIVILIZED TRIBE.	Per cent.	CIVILIZED TRIBE.	Per cent.
Visayan	46.8	Pangasinán	5.0
Tagalog	21.2	Pampangan	4.1
Ilocano	11.7	Cagayán	2.3
Bicol	8.2	Zambalan	0.7

As is seen, the Visayans formed nearly one-half of the civilized population, the Tagálogs a little more than one-fifth, and the Ilocanos about one-eighth.

NUMBER OF PEOPLE IN EACH OF THE FILIPINO TRIBES: 1902.

To show how closely, it may be said that after eliminating from consideration the municipalities in the provinces of Benguet and Lepanto-Bontoc, and those of the comandancias, it appears that out of the 950 municipalities remaining for consideration, 179 contained of males 21 years and over only a single Christian tribe, while 94 towns contained only one such person different from the prevailing tribe. In 620 municipalities, or nearly two-thirds of all, at least 99 per cent of such persons were of one tribe, and in 820, at least 90 per cent were of one tribe. Similar facts for the separate provinces are shown in the following table:

Classification of the municipalities by the proportion of the population in the dominant tribe.

PROVINCE,	Total.	100 per cent.	99 per cent.	90 to 99 per cent.	75 to 90 per cent.	50 to 75 per cent.	Less than 50 per cent.

As suggested by the map, there is one tribe, and one only, which seems to possess a migratory, colonizing disposition—that is, the Ilocano. These people, who appear to have originally settled on the northwestern coast of Luzón, from Lingayén gulf to the northern point, on a very narrow strip of coast line, have peopled it densely, making the central of the three Ilocano provinces, Ilocos Sur, the most densely settled province in the archipelago, and have apparently been forced to migrate for want of land. They have become the civilized people of Abra, Lepanto-Bontoc, Benguet, and Nueva Vizcaya. They

have crossed over the mountains into the valley of the Cagayán river and have divided the provinces of Cagayán and Isabela with the Cagayanés. They have crossed the Zambalan mountains and form a considerable part of the population of Zambales province, and, finally, they occupy in large numbers the territory comprised partly in Pangasinán, Tárlac, and Nueva Écija provinces. In all these cases where they have invaded the territory of other tribes, they have mixed with them very little, but have formed villages by themselves. These villages or barrios are, in most cases, combined with barrios of other tribes in the municipalities, some of which are predominantly Ilocano and others predominantly of other tribes. It is in these municipalities, and in these only, in which there is any marked mixture of tribes. Aside from this the boundaries of the Tagálog, Bicol, and Visayan peoples are quite sharp and closely defined.

The municipalities of Ilocos Norte, Ilocos Sur, La Unión, and Abra contain very few Filipinos other than Ilocanos, but in the provinces to which they have migrated there is a great mixture in the municipalities. The municipalities of the Cagayán country are, as a rule, very much mixed with Ilocanos, except in the Babuyán and Batán islands, which are without other inhabitants than Cagayanés. The Pangasinanes are very pure, except in the southeast municipalities of Pangasinán, where they are mixed with Ilocanos. Most of the municipalities of Tárlac are peopled with Pampangans, Ilocanos, and some Pangasinanes. Nueva Écija, while mainly Tagálog, contains many Ilocanos in the northwest. The province of Zambales contains few municipalities which are purely Zambalan; most of them contain Ilocanos and a few Pangasinanes. The provinces of Bataán, Rizal, La Laguna, Tayabas, Cavite, and Batangas, together with the island of Marinduque, are almost purely Tagálog. The city of Manila, while prominently Tagálog, contains considerable elements from other tribes, and naturally the territory about the city is to some extent mixed in a similar manner. The following table shows the distribution of the native brown people of Manila by tribes:

NATIVE TRIBE.	Per cent of total.	NATIVE TRIBE.	Per cent of total.
Tagálog	80.6	Bicol	1.0
Pampangan	8.2	Pangasinán	0.9
Visayan	4.5	All others	0.6
Ilocano	4.3		

Most of Mindoro, including all the coast except the southern part, is Tagálog, but the southern coast has been settled by Visayans. The Bícols have a practical monopoly of southern Luzón, including the provinces of Sorsogón, Albay, and Ambos Camarines, with the exception of the northwestern part of the last, which is Tagálog. They

also hold the island of Burias, of the province of Masbate, the rest of that province being Visayan. The civilized population of the remaining islands, including the Visayas, Romblón, and the coast of Mindanao, Paragua, the Calamianes, and the Cuyos are almost exclusively Visayan. Indeed, of all the civilized tribes the Visayans are the most exclusive, owing to their insular habitat, separated by water from their neighbors. There are in their municipalities but very few natives who are not Visayan.

What has been said concerning the tribal distribution by municipalities is measurably true concerning the larger units, the provinces. Out of the whole number no fewer than 16, or more than one-third of the civil provinces, contained less than 1 per cent of alien tribes, and 8 others less than 2 per cent. Bohol's native population was 99.8 per cent Visayan; that of Cápiz, 99.6 per cent; that of Cebú and Negros Oriental, 99.5 per cent each. Ilocos Norte contained 99.7 per cent Ilocanos, and Ilocos Sur, 99.3 per cent. Batangas contained 99.4 per cent Tagálogs. These facts concerning the provinces are set forth in the following table:

Proportion which the number of the dominating tribe or tribes in each province bears to the population of that province.

PROVINCE.	DOMINATING TRIBE.		PROVINCE.	DOMINATING TRIBE.	
	Name.	Percent.		Name.	Percent.
Bohol	Visayan	99.8	Rizal	Tagalog	97.4

Bulacán	Tagalog	98.7	Nueva Ecija	Tagalog	65.0
Romblón	Visayan	98.7		Ilocano	30.6
Tagayasan	Tagalog	98.3	Tarlac	Ilocano	60.1
Paragua	Visayan	98.2		Pampangan	29.3
Cavite	Tagalog	98.1	Zambales	Ilocano	46.7
Sorsogón	Bicol	98.0		Zambalan	45.1

The wild peoples of Luzón, the Visayas and Mindoro, are confined almost entirely to the interior of the islands, the exception being that part of the east coast of Luzón not occupied by civilized peoples. The great mountain range of northern Luzón, the Caraballos Occidentales, is occupied almost exclusively by the Igorots, and the Sierra Madre, fronting the Pacific in northern Luzón, by a sparse population

of Negritos. Between the two, about the headwaters of the Cagayán river, is the territory of the Ilongots. The Zambales mountains are occupied by the Negritos, and they are also found in small bodies scattered about on several of the islands. The Mangyans are found in the interior of Mindanao, the Bukidnons in Panay, Negros, Mindanao, and in small numbers in other islands. The Moros occupy the Sulu archipelago, the coast of southern Paragua, and much of that of Mindanao, extending into the interior about Lake Lanao and in the Cottabato valley. The interior of the island of Paragua is occupied by the Tagbanúas and Bataks, and the interior of Mindanao by a variety of wild peoples, known in various parts of the island as Subanos, Mandayas, Manobos, Bagobos, Atas, Tirurayes, and Bilans.

In the schedules of the civilized peoples there were enumerated 31,963 members of the wild tribes, or 4.7 per cent of the total number of the wild people. The number and tribes of the persons thus enumerated are presented in the following table, which serves to show their distribution both among the provinces and among the tribes:

Detail of the number of wild tribes enumerated with civilized people.

PROVINCE OR COMANDANCIA. *	Total.	Igorot.	Moro.	Negrito.	Bukid-non.	Mang-yan.	Ilongot.

The reasons for finding these people on the schedules of population with the civilized inhabitants differ in different cases. In Dávao and Dapitan the Jesuits were very active during the latter years of Spanish domination in converting to Christianity the peoples among whom they lived, in settling them in permanent communities, and in teaching them the arts of agriculture. From these settlements were derived almost entirely the large number of Mandayas, Bagobos, and Manobos of Dávao, and the Subanos of Dapitan. The Moros of Dávao are mainly those living on Sámal Island in settled communities pursuing agricultural arts.

The large number of Igorots in Nueva Vizcaya consists in part of Igorots who have been converted to Christianity, and in part of women of that people who have married members of the Christian tribes, but who, with their children, were properly recorded as Igorots.

The above statements account for all the members of the tribes here under discussion, with the exception of two or three thousand who

were widely scattered over the archipelago. These wild people, entered on Schedule No. 1, were found living in the same towns with the civilized people, many of them as servants in houses of civilized Filipinos, and were recorded by the regular enumerators in the same manner as North American Indians under similar conditions have always been enumerated.

SEX.

The population was divided as to sex very nearly equally, there being 3,496,652 males and 3,491,034 females. Expressed in percentages of the total population, males constituted 50.04 per cent and females 49.96 per cent. This distribution of the total population by sex can scarcely be considered a normal one, owing to the fact that the foreign born population was almost entirely male. Except in Manila this element was trifling, and affected the proportion of the sexes very slightly. In Manila, however, the element of foreign birth was large and produced a very marked effect upon the distribution by sex, the proportions being 59.9 per cent males and 40.1 per cent females. In other words, about three-fifths of the population of the city were of the male sex.

Considering sex with relation to nativity, there was a total native population of 6,931,548, of which 3,443,816 were males and 3,487,732 were females, the proportions between the sexes being 49.7 per cent males and 50.3 per cent females. Thus among the brown people the females were slightly in excess.

The Chinese, the most numerously represented foreign inhabitants in the islands, numbered 41,035, of whom 40,518 were males and 517 only were females, the proportions of the sexes being 98.7 per cent for males and 1.3 per cent for females.

Persons born in the United States numbered 8,135, of whom 6,920 were males and 1,215 were females, the proportions of the sexes being 85.1 per cent males and 14.9 per cent females.

Persons born in the United Kingdom numbered only 667, of whom 549 were males and 118 were females, the proportions being 82.3 per cent for males and 17.7 per cent for females.

The total number of persons of German birth found in the Philippines was 368, of whom 344 were males and 24 females, the proportions being 93.5 per cent for males and 6.5 per cent for females.

Persons of Spanish birth remaining in the islands numbered 3,888, of whom 3,187 were males and 701 females, showing the proportions of 82 per cent males and 18 per cent females.

The only class of the foreign born in which the sexes showed an approach to equality in numbers was the Japanese. These numbered 921, of whom 475 were males and 446 were females. This large proportional number of females was probably in the main composed of prostitutes.

Returning now to the total Christian population, the following table is presented, showing by provinces and comandancias the proportions of the sexes:

Proportion of males and of females to total Christian population.

PROVINCE OR COMANDANCIA.	Male.	Female.	PROVINCE OR COMANDANCIA.	Male.	Female.

In the above 50 provinces and comandancias males were in excess in 28 and females in 22. As a rule, subject, however, to several exceptions, the most populous and densely settled provinces showed an excess of females, while the newer and more sparsely settled showed an excess of males—a condition of things which was naturally to be expected. In the Ilocano provinces in northwestern Luzón there was an excess of females; the two provinces of the Cagayanes in north-

Classifying the municipalities in accordance with the predominating sex, it appears that in a little more than one-half the municipalities, namely, 526, females were in excess, and in 456, males were in excess. In making this classification the municipalities of Benguet and Lepanto-Bontoc were not considered, inasmuch as the civilized population in most of them was trifling.

The following table shows these figures in detail, by provinces and comandancias:

Number of municipalities showing excess of males or females among natives.

PROVINCE OR COMANDANCIA.	Males in excess.	Females in excess.	PROVINCE OR COMANDANCIA.	Males in excess.	Females in excess.
Total	456	523	Lepanto-Bontoc	1	14
Abra	5	6	Levite	37	10
Aguila	9	18	Manila city (districts)	1	4
Aguias Comandancia	10	24	Marinduque	15	2
Albay	1	20	Masbate	8	4
Antique	1	6	Mindoro	18	7
Bataan	1	6	Misamis	38	1
Batanga	2	20	Negros Occidental	11	13
Benguet	1	1	Negros Oriental	15	8
Bulacan	3	32	Nueva Ecija	5	1
Bulacan	2	28	Nueva Vizcaya	5	18
Cagayan	22	8	Pangasinan	19	18
Cebu	34	34	Pangasinan Sur	3	2
Cebu	7	16	Pangasinan Sur	1	1
Cebu	11	46	Rio	15	17
Cebu	1	1	Romblon	6	5
Cebu	8	1	Samar	30	13
Davao	0	1	Samar	1	1
Davao Norte	2	18	Sorsogon	12	3
Davao Sur	2	22	Surigao	27	7
Iloilo	12	42	Tarlac	16	2
Iloilo	14	1	Uvala	1	1
Iloilo	1	1	Tuguegarao	17	8
La Laguna	1	28	Zambales	12	12
La Union	4	11	Zamboanga	1	1

The following table shows the distribution of sex among the eight civilized tribes. In only one, the Zambalan, were males in excess of females. Among the Pampangans the sexes were practically equal in number. In all others females were in excess.

CIVILIZED TRIBE.	Male.	Female.	CIVILIZED TRIBE.	Male.	Female.
Zambalan	26.7	26.5	Tuguegarao	26.4	26.2
Pangasinan	26.0	26.0	Vigan	26.4	26.2
Cebu	26.2	26.7	Iloilo	26.7	26.8
Pangasinan	26.2	26.7	Tuguegarao	26.5	26.7

AGE.

The average age of the people of the Philippine Islands was 33.9 years. This was 2.4 years less than the average age of the people of the United States, which was 36.3 years, and was greater than that of the negroes in the United States, 33.2 years. The average age of the brown people in the Philippines was 33.8 years, a trifle less than that of the total population. The average age of the Chinese was 33.4

years, much less than that of the same people of the United States, which was 40 years. The average age of the white people in the Philippines was 30.3 years.

The population under 1 year of age numbered 167,905. This was 2.4 per cent of the total population. For comparison we have a similar proportion in Porto Rico of 2.7 per cent; in the United States, 2.5 per cent; and in Cuba, of 1.5 per cent. The low proportion in Cuba was supposed to be due to the disturbed conditions in the island prior to the taking of the census. Similar causes doubtless accounted for the small proportion of this class in the Philippines.

The children under 5 years numbered 1,054,096, which was 15.1 per cent of the total population. The same class in the United States formed 12.1 per cent; in Porto Rico, 15.8 per cent; and in Cuba, 8.3 per cent.

The number under 10 years of age was 2,014,160, or 28.8 per cent of the total population. The same class in the United States formed 23.8 per cent; in Porto Rico, 30.9 per cent; and in Cuba, 22.7 per cent.

The above figures do not indicate any decided disproportion in the children of these ages. They were slightly less than in Porto Rico, which country had been in profound peace prior to the taking of the census. They were larger than in the United States, with the exception of the class under 1 year of age, where they were slightly less, and they were in each class decidedly greater than in Cuba.

The number of children between 5 and 17—that is, of school age—was 2,137,397, or 30.6 per cent of the population. The proportion of school children in Porto Rico was 32.8 per cent, a little greater, while on the other hand, that in the United States was 28.3 per cent, or slightly less.

The following table shows the age distribution of the civilized people of the archipelago by ten-year periods, and in parallel columns the distribution of the people of the United States, of Cuba, and of Porto Rico:

AGE PERIOD.	Philippines.	United States.	Cuba.	Porto Rico.
Under 10 years.....	28.8	23.8	22.7	30.9
10 to 19 years.....	20.7	20.6	25.3	22.8
20 to 29 years.....	17.1	18.3	18.5	18.1
30 to 39 years.....	13.4	13.9	13.9	11.7
40 to 49 years.....	8.4	10.1	9.2	7.4
50 to 59 years.....	5.7	6.8	5.8	5.1
60 to 69 years.....	3.8	4.1	3.1	2.6
70 to 79 years.....	1.3	1.9	1.0	0.9
80 to 89 years.....	0.5	0.4	0.4	0.4
90 to 99 years.....	0.2	0.1	0.1	0.1
100 years and over.....	0.1			

It appears, as has already been shown, that children under 10 years of age were in larger proportion in the Philippine Islands than in the

United States or Cuba, but less than in Porto Rico. Persons between 10 and 19 years were in slightly larger proportion in the Philippines than in the United States, but less than in either of the other countries. Between 20 and 29 they were in smaller proportions in the Philippines than in either of these regions. Between 30 and 39 years, 40 and 49, and 50 and 59 there were larger proportions in the Philippine Islands than in Porto Rico, but smaller proportions than in either the United States or Cuba. Between 60 and 69 the proportion was greater than in Cuba or in Porto Rico, but less than in the United States. Between 80 and 89, and at more advanced ages, the proportions in the Philippine Islands exceeded those of either of the three countries used in comparison.

It is perfectly well known that ignorant people of advanced age are frequently disposed to exaggerate their ages. In the United States the proportion of reported centenarians was far greater among the negroes than among the whites. In the Philippine Islands no fewer than 3,553 persons were reported as being more than 100 years of age. It is not probable that a Filipino ever reached that age, or that many have exceeded the age of 80 years. To test the question, several hundred of these cases of reported great age were returned to the supervisors of the census, with instructions to have the cases investigated thoroughly, and, if possible, the ages verified by reference to the baptismal certificates. Owing to the destruction of records during the recent insurrection it was possible to obtain this evidence in only a very few cases, but in every such case the reported age was reduced greatly. The average reduction in all such cases was from 106 years to 83 years, that is to say, the true age was about four-fifths the reported age. The proportions of persons of advanced age, particularly above the age of 80, in the column of the preceding table referring to the Philippine Islands should therefore be scaled down materially.

The following table, in a certain sense, is a summation of the preceding one, giving for the Philippine Islands, the United States, Cuba, and Porto Rico the proportional part of the total population which was under the age designated in the first column:

AGE PERIOD.	Philippines.	United States.	Cuba.	Porto Rico.
Under 10 years.....	28.8	28.8	22.7	30.9
Under 10 years.....	46.5	44.4	45.0	53.7
Under 10 years.....	66.0	62.7	66.5	71.5
Under 10 years.....	80.0	70.6	80.4	82.5
Under 10 years.....	88.4	86.7	89.6	90.9
Under 10 years.....	94.1	90.5	95.4	96.0
Under 10 years.....	97.4	97.6	98.5	98.6
Under 10 years.....	99.2	99.3	99.3	99.5
Under 10 years.....	99.7	99.9	99.3	99.9

Under 20 years were found very nearly half the population of the Philippine Islands, while in the United States the proportion was decidedly less. In Cuba it was somewhat less, but decidedly greater in Porto Rico. Two-thirds of the population of the Philippines were under the age of 30, which was a larger proportion than that of the United States, about equal to that of Cuba, and much less than that of Porto Rico. Four-fifths of the population of the Philippines were under the age of 40 years, which was a larger proportion than in the United States, a little less than that of Cuba, and decidedly less than that of Porto Rico. Seven-eighths of the population of the Philippines were under the age of 50, a little more than the proportion for the United States, and less than that for Cuba and Porto Rico.

The following table shows the proportion which children under 1 year of age bore to the total population of each province. That proportion had a wide range, from Pangasinán, with a proportion 50 per cent greater than that of the archipelago (2.4 per cent), down to Samar, where less than one person in a hundred was in this group, and Benguet, where one person in two hundred and fifty was less than 1 year of age. Fourteen of the provinces had a proportion greater than that of Porto Rico, in which the proportion was large, and 6 had a proportion less than that of Cuba, in which the proportion was very small. The small proportions were in most cases found in comandancias and other sparsely settled regions in large part populated by adults. In many cases, doubtless, insurrection and the cholera had much to do with the small proportions of children of this class.

Proportion of children under 1 year of age.

Albay.....	2.3	Benguet.....	0.4

The following table shows the proportion of children under 5 years of age, by provinces and comandancias. Here the range was also great, from Pangasinán, with 18.8 per cent, down to Tawi Tawi, with 5.4 per cent. As in the foregoing table, it is seen that the comandancias and sparsely populated provinces had small proportions, the reason being the same as above given. One of the smallest proportions was that of Manila and was due to excessive mortality among young children. There were 17 provinces with a proportion greater than that of Porto Rico, and 3 only which were less than that of Cuba.

Proportion of children under 5 years of age.

PROVINCE OR COMANDANCIA.	Per cent.	PROVINCE OR COMANDANCIA.	Per cent.
Pangasinán	18.8	Isabela	15.0
La Unión	17.7	Cápiz	14.9

Paragua	15.1	Manila city	7.9
Bulacán	15.0	Tawi Tawi	5.4

The following table shows, by provinces and comandancias, the proportion which children under 10 years of age bore to the total population. Here Masbate had the highest proportion, and Pangasinán, which was first in the two preceding tables, stood fifth. The range was still large, from 34.6 per cent down to 9.7 per cent, the latter proportion being in Tawi Tawi, a comandancia having a trifling population under frontier conditions. As in earlier groups the comandancias had small proportions of children under 10 years of age, and Manila also stood low, owing to the reasons pointed out above. There were 10 provinces which had a larger proportion of children of this class than Porto Rico, and 7 which had a lower proportion than Cuba. These 7, however, consisted of comandancias, the sparsely populated province of Benguet, and the city of Manila.

The following table shows, by provinces and comandancias, the proportion which children of school age bore to the total number of inhabitants. If the sparsely populated comandancias and the province of Benguet, together with the city of Manila, are left out of consideration, the range of proportions was not large, being from Marinduque, with 34.8 per cent, down to Pangasinán, with 26.2 per cent. Eight provinces had a larger proportion of school children than Porto Rico, and 13, including comandancias, etc., had proportions less than that of the United States.

The following table shows the proportion, by provinces and comandancias, which the males of voting age bore to the total population. Here the head of the column is occupied by comandancias, sparsely populated provinces, and the city of Manila. The reasons for this have been frequently given and need not be repeated. All of the Tagalog provinces except Batangas and Marinduque were above the average of the archipelago (24.0 per cent), while on the other hand all the Visayan provinces except Negros Occidental and Samar were below that average.

Here in unbroken line at the foot of the column are nine military districts. Aside from them the range was from Antique, with 4.5 per cent at the head, down to Surigao, with 2 per cent at the foot.

The following table shows the age distribution by sex—that is, the proportion of the total of each sex which was contained in each of the several age groups. The last two columns show the excess of the proportion of males over females, or of females over males in the several age groups. Under 10 years of age males were in excess; between 10 and 30 years females were in excess. In the next four age groups males were again in excess, while in the last four, females were in excess, although not to an extent sufficient to be appreciable as a per cent.

AGE PERIOD.	PROPORTION OF TOTAL.		EXCESS.	
	Male.	Female.	Male.	Female.
Under 10 years.....	29.2	28.4	0.8

20 to 29 years.....	15.8	18.4		2.6
30 to 39 years.....	14.0	12.7	1.3	
40 to 49 years.....	8.7	8.1	0.6	
50 to 59 years.....	5.8	5.6	0.2	
60 to 69 years.....	3.9	3.8	0.1	
70 to 79 years.....	1.3	1.3		(1)
80 to 89 years.....	0.5	0.5		(1)
90 to 99 years.....	0.2	0.2		(1)
100 years and over.....	0.1	0.1		(1)

¹ A numerical excess of females, but too small to express as a proportion.

The following table shows the proportion in each age group of brown people and similar proportions for each of the eight civilized tribes. Of the total brown, 29 per cent were less than 10 years of age and 49.8 per cent, or practically one-half, were below the age of 20. Comparing the Bicolos with the total brown, it appears that the proportion under 10 years was somewhat less, being 27.4 per cent, but that the proportion under 20 was practically the same, being 49.8 per cent, so that the distribution of the Bicolos as to age was not markedly different from that of the total browns. The Cagayanes presented a different situation. The proportion under 10 years was not less than 34.5 per cent, considerably more than one-third, while the proportion under 20 was 55.2 per cent, being much more than one-half. The Ilocanos were slightly deficient in children under 10 years, the proportion being 28 per cent, and in the proportion under 20 years, 46.1 per cent. The Ilocanos were on an average somewhat older than the total brown. The Pampangans presented similar characteristics, the proportion of children under 10 years being 27.2 per cent, and that under 20, 47.4 per cent. The Pangasinanes resembled the Cagayanes in having a large proportion of young people, the proportion under 10 years

being 35.2 per cent, and that under 20 years, 53 per cent. The Tagálogs showed the smallest proportion of children of all, that under 10 years of age being 25.3 per cent, and under 20, 46.5 per cent. Although among the Visayans the proportion of children under 1 was small, that under 10 was large, being 30.5 per cent, and the proportion under 20 was 52 per cent. The Zambalans had a proportion of 30.8 per cent under 10 years of age, which was slightly larger than that of the total brown, while the proportion under 20 was exactly one-half of the total.

Proportions of total brown and of civilized tribes in each age group.

AGE PERIOD.	Total brown.	Bicol.	Cagayán.	Ilo-cano.	Pampangan.	Pangasinán.	Tagalog.	Visayan.	Zambalan.

CONJUGAL CONDITION.

SINGLE.

Out of a total civilized population of 6,987,686, 3,939,422, or 56.4 per cent, were reported as single. The proportion of single in the Philippine Islands was slightly less than in the United States, where it was 57.9 per cent of the total population. For comparison the proportions of single among the population of certain countries are here given:

COUNTRY.	Per cent.	COUNTRY.	Per cent.
Jamaica.....	77.5	Portugal.....	60.7
Cuba.....	70.6	Austria.....	60.1
Porto Rico.....	69.7	Belgium.....	60.0
Argentina.....	69.7	Germany.....	59.5
Mexico.....	62.0	United States.....	57.9
United Kingdom.....	62.0	Philippine Islands.....	56.4
Canada.....	61.7	British India.....	41.9
Switzerland.....	61.1		

It is seen that of all these countries the proportion of single was smaller in the Philippines than in any except India, where marriages are made in infancy.

Of the total male population of the Philippines, 58.6 per cent were reported as single, and of the female, 54.1 per cent. These proportions, also, were slightly less than in the United States, which were for males, 60.6 per cent, and for females, 55.1 per cent.

CONJUGAL CONDITION IN PROPORTIONS OF EACH AGE GROUP

The following table shows the proportion which the single of the two sexes and different age groups bore to the total of each age group:

AGE GROUP.	Male.	Female.	AGE GROUP.	Male.	Female.
10 to 14 years.....	99.9	99.2	45 to 54 years.....	5.8	7.8
15 to 24 years.....	77.3	55.0	55 to 64 years.....	4.0	7.3
25 to 34 years.....	23.4	15.6	65 years and over.....	3.6	7.7
35 to 44 years.....	9.3	9.4			

From this it appears that 999 out of every thousand males under the age of 15 were unmarried, while of the females 992 had remained single. The proportion of single of the females diminished far more rapidly than that of males up to the age of 35 years, where it reached nearly a standstill, while that of males diminished to the most advanced age. The proportion of single males at the age of 65 and over was less than half that of the females at that age.

The following table shows the proportion of the single among the civilized Filipino tribes and among the yellow and white peoples:

RACE AND TRIBE.	Per cent.	RACE AND TRIBE.	Per cent.
Yellow.....	72.8	Pampangan.....	54.7
White.....	61.3	Pangasinan.....	53.8
Visayan.....	59.9	Tagalog.....	52.7
Cagayan.....	56.3	Zambalan.....	51.6
Bicol.....	55.9	Ilocano.....	50.2

It appears that nearly three-fourths of the yellow people were single and more than three-fifths of the whites. The explanation of this is in the fact that there were very few women of these two races in the archipelago. Among the different tribes of Filipinos the largest proportion was among the Visayans, where nearly three-fifths of the people were single, a fact which is in accord with the large number of children in these provinces. The smallest proportions were found among the Ilocanos and Zambalans.

The following table shows the proportions of males and females among the single of the different Filipino tribes and among the white and yellow peoples:

RACE AND TRIBE.	PER CENT.		RACE AND TRIBE.	PER CENT.	
	Male.	Female.		Male.	Female.
Yellow.....	97.9	2.1	Pampangan.....	51.9	48.1
White.....	84.0	16.0	Bicol.....	51.7	48.3
Zambalan.....	53.2	46.8	Tagalog.....	51.6	48.4
Cagayan.....	52.9	47.1	Visayan.....	51.5	48.5
Pangasinan.....	52.0	48.0	Ilocano.....	51.2	48.8

Nearly all of the yellow people and five-sixths of the whites were males. Among the Filipino tribes males were in excess among the single in all cases. This is to be accounted for by the fact that women marry younger than men.

The following table shows the proportion which the single bore to the total population, by provinces and comandancias:

Proportion of single to total population.

PROVINCE OR COMANDANCIA.	Per cent.	PROVINCE OR COMANDANCIA.	Per cent.
Cebú	63.9	Bulacán	55.6
Bohol	63.5	Ilocos Sur	55.1
Zamboanga	63.1	Negros Occidental	54.8
Misamis	62.9	Dávao	54.6
Leyte	62.4	Lepanto-Bontoc	54.6
Marinduque	62.0	Ambos Camarines	54.2
Negros Oriental	61.6	Mindoro	54.2
Tawi Tawi	61.3	Batán	54.0
Masbate	61.1	Batangas	53.8
Shassi	59.9	Ilocos Norte	53.4
Surigao	59.8	Manila city	53.4
Basilan	59.3	Zambales	53.3
Dapitan	59.0	Nueva Ecija	52.7
Albay	57.6	Benguet	52.1
Antique	57.6	Tayabas	52.0
Cápiz	57.1	Cavite	51.3
Romblón	56.9	Tárlac	51.0
Paragua	56.8	Cagayán	50.6
Sorsogón	56.7	Paragua Sur	50.6
La Unión	56.2	Rizal	50.1
Samar	56.2	Pangasinán	49.9
Cottabato	56.1	La Laguna	49.8
Pampanga	56.1	Isabela	48.6
Iloilo	55.9	Joló	46.1
Abra	55.6	Nueva Vizcaya	43.3

Examining the above table, it will be seen that in the Visayan provinces, with the exception of Iloilo, Negros Occidental, and Samar, the proportion of single was in excess of the average of the archipelago, and that in two of the Bicol provinces, namely, Albay and Sorsogón, the proportion was greater. On the other hand, those provinces which are peculiarly Ilocano, Pangasinán, Pampangan, Tagálog, Zambalan, and Cagayán, all had proportions of single less than that for the archipelago.

In explanation of this it is probable that the proportion of children in these Visayan and Bicol provinces was in excess of that of the other provinces.

In 15 of the provinces and districts the proportion of single was above the average, while in the remainder it was below.

The following table shows the proportion of single females to single males, expressed in the form of the proportion of the former to 100 of the latter, by provinces and comandancias:

Proportion of single females to single males.

PROVINCE OR COMANDANCIA.	Number of single females to 100 single males.	PROVINCE OR COMANDANCIA.	Number of single females to 100 single males.
Cápiz	111	Rizal	90
Antique	105	Tarlac	90
Bohol	104	Surigao	89
Ilocos Norte	103	Samar	88
Batangas	102	Dapitan	87
Ilocos Sur	102	Tayabas	87
La Unión	102	Cagayán	86
Marinduque	100	Masbate	86
Paragua	100	Misamis	86
Bulacán	99	Sorsogón	86
Cebu	98	Zamboanga	86
Abra	97	Lepanto-Bontoc	84
Pampanga	97	Mindoro	84
Negros Oriental	96	Davao	81
Albay	95	Nueva Vizcaya	80
Cavite	93	Isabela	79
Iloilo	93	Negros Occidental	78
Ambos Camarines	92	Basilan	74
La Laguna	92	Cottabato	56
Bataan	91	Joló	50
Pangasinán	91	Manila city	50
Romblón	91	Paragua Sur	48
Zambales	91	Benguet	41
Leyte	90	Siassi	35
Nueva Ecija	90	Tawi Tawi	24

It will be seen that in 9 provinces and military districts the sexes were equal, or females were in excess. In all the others females were in the minority. In the sparsely settled provinces and comandancias the disproportion of males was great, as in Benguet, Cottabato, Joló, etc. It was also greater in the city of Manila, there being in that city two single males to every single female. This was due in part to the large body of foreign born, nearly all of whom were males, and also to the fact, heretofore pointed out, that even among the Filipino people there was a great disproportion of males in this city.

MARRIED.

As in Cuba and Porto Rico, the married may be divided into two classes, those legally married and those living together by mutual consent, or as they will be spoken of hereafter, consensually married. The legally married numbered 2,314,583, constituting 33.1 per cent of the entire population, a proportion somewhat less than in the United States, where it was 36.5 per cent. It formed a strong contrast with the proportion in Cuba, which was only 15.7 per cent, or less than half as great a proportion. The number consensually married was 233,670, forming only 3.3 per cent of the population. This class was, in the

Philippines, much smaller proportionally than in Cuba, where it formed no less than 8.4 per cent of the population. Adding together the legally and consensually married the proportion of all married persons in the Philippines became 36.4 per cent of the population, or about the same as in the United States, while in Cuba the legally and consensually married, together formed only 24.1 per cent of the population.

The following table shows the proportion of married in several other countries, introduced here for comparison:

COUNTRY.	Per cent.	COUNTRY.	Per cent.
British India.....	46.5	Portugal.....	33.1
United States.....	36.5	United Kingdom.....	32.3
Philippine Islands.....	36.4	Switzerland.....	32.1
Japan.....	35.6	Mexico.....	31.0
Germany.....	34.8	Argentina.....	26.0
Austria.....	34.3	Porto Rico.....	25.4
Belgium.....	34.2	Cuba.....	24.1
Canada.....	34.1	Jamaica.....	18.6

The proportion of married in the Philippines, including those legally and consensually united, was greater than in any country here represented except British India, where it was accounted for by infant marriages, and the United States.

Classifying the legally married by sex, it is found that the males numbered 1,163,562, which constituted 33.3 per cent of all males, and the females numbered 1,151,021, or 33 per cent of all females. Similarly classifying the consensually married by sex, the males in such unions numbered 115,129, or 3.3 per cent of all males, and the females numbered 118,541, or 3.4 per cent of all females. It is to be noted that the females in these unions slightly outnumbered the males.

The following table shows the legally married classified by sex and age groups, expressed in percentages to the total of each group:

AGE PERIOD.	Male.	Female.	AGE PERIOD.	Male.	Female.
10 to 14 years.....	0.1	0.7	45 to 54 years.....	74.8	58.2
15 to 24 years.....	19.9	38.7	55 to 64 years.....	69.9	45.0
25 to 34 years.....	65.3	69.3	65 years and over.....	56.6	24.0
35 to 44 years.....	75.2	67.6			

From the above it appears that under the age of 15, one in a thousand males and seven in a thousand females were married, and that between the ages of 15 and 24 one-fifth of the males and nearly two-fifths of the females were married. At the age of 35 there were nearly as many males married as females, and beyond that the proportion of the former was greater than that of the latter.

The following table shows the proportion of the legally married among the Filipino tribes, and among the yellow and white races:

RACE AND TRIBE.	Per cent.	RACE AND TRIBE.	Per cent.
Ilocano	39.5	Cagayán	34.4
Pangasinán	37.5	Bicol	33.0
Zambalan	36.3	Visayan	29.8
Pampangan	36.1	White	28.0
Tagalog	35.7	Yellow	18.4

The proportion of legally married was very small among the yellow people, and among the whites it was less than with any Filipino tribe, while on the average 33 per cent of the Filipinos were married. This proportion was considerably exceeded among the Ilocanos, among whom nearly two-fifths were married, while on the other hand among the Visayans less than three-tenths had taken unto themselves wives.

The following table shows for the various civilized tribes of the Filipinos, and for the yellow and white races, the proportion of males and females among the legally married:

RACE AND TRIBE.	Male.	Female.	RACE AND TRIBE.	Male.	Female.
Yellow	96.3	3.7	Tagalog	50.1	49.9
White	69.0	31.0	Visayan	50.0	50.0
Ilocano	50.7	49.3	Zambalan	49.6	50.4
Bicol	50.1	49.9	Pangasinán	49.5	50.5
Pampangan	50.1	49.9	Cagayán	49.1	50.9

Of the yellow people nearly all the married were males, and of the white people more than two-thirds were males. The former race does, to a considerable extent, unite with Filipino women, and perhaps the latter race does also, though to a less extent. Of the eight civilized tribes the males outnumbered the females in five, while in three only the females outnumbered the males, this proportion in any case being but slight.

The following table shows the consensually married by sex and age periods, expressed in the form of proportions to the total number of each group:

AGE PERIOD.	Male.	Female.	AGE PERIOD.	Male.	Female.
10 to 14 years		0.1	45 to 54 years	7.3	5.3
15 to 24 years	1.8	4.3	55 to 64 years	6.5	3.0
25 to 34 years	6.8	7.6	65 years and over	5.3	1.3
35 to 44 years	7.7	7.3			

Under the age of 15 years the number of males who had entered into this relation was too small to express in a proportion, while of females it was about one in a thousand. The proportion increased rapidly and in the age group of 25 to 34 years reached a maximum for

the females of 7.6 per cent and in the following age group of 35 to 44 years reached a maximum for males of 7.7 per cent. The proportions diminished with both sexes with increasing age, that of males remaining much larger than that of females.

The following table shows the proportion which the consensually married bore to the total population of each tribe and of the white and yellow races:

RACE AND TRIBE.	Per cent.	RACE AND TRIBE.	Per cent.
White.....	7.9	Cagayán.....	3.1
Yellow.....	7.3	Tagalog.....	2.7
Zambalan.....	5.4	Ilocano.....	2.6
Bicol.....	4.7	Pangasinán.....	2.4
Visayan.....	3.7	Pampangan.....	1.8

Among the white and yellow peoples the proportions were much greater than among any of the Filipino tribes, indicating, as stated in connection with the married, that both these races have to some extent mixed with the Filipinos. Among the Filipino tribes the largest proportional number of this class was found among the Zambalans and the least among the Pampangans.

The following table shows the distribution of the consensually married, by sex, among the civilized Filipino tribes and the yellow and white races:

RACE AND TRIBE.	Male.	Female.	RACE AND TRIBE.	Male.	Female.
White.....	98.5	1.5	Visayan.....	48.2	51.8
Yellow.....	98.5	1.5	Tagalog.....	48.0	52.0
Ilocano.....	51.2	48.8	Zambalan.....	47.2	52.8
Pangasinán.....	48.8	51.2	Pampangan.....	46.2	53.8
Bicol.....	48.6	51.4	Cagayán.....	42.6	57.4

Here it appears that the yellow and white peoples who were consensually married were nearly all males, the proportion of each race being 98.5 per cent, while that of females was trifling. On the other hand, among the Filipino tribes there was but one, the Ilocano, in which the proportion of males in this class was greater than that of females. This fact goes to show that the partners of the white and yellow races were commonly drawn from among the Filipinos.

The following table shows the legally married and consensually married, added together and classified by sex and age groups, the figures being expressed by percentages of the total number in each group:

AGE PERIOD.	Male.	Female.	AGE PERIOD.	Male.	Female.
10 to 14 years.....	0.1	0.8	45 to 54 years.....	82.1	63.5
15 to 24 years.....	21.7	43.0	55 to 64 years.....	76.4	48.0
25 to 34 years.....	72.1	76.9	65 years and over.....	61.9	25.3
35 to 44 years.....	82.9	74.9			

These figures show that the largest proportion of married males was found between the ages of 35 and 44 years, and among females between 25 and 34 years. Beyond these ages the proportions diminished with increasing widowhood.

The following table shows the proportion which the total married, including legally married and consensually married, bore to the total population, by provinces and comandancias:

Proportion of married to total population.

PROVINCE OR COMANDANCIA.	Total married.	Legally married.	Consen- sually married.	PROVINCE OR COMANDANCIA.	Total married.	Legally married.	Consen- sually married.
Joló	49.4	42.9	6.5	Negros Occidental	37.7	29.3	8.4
Nueva Vizcaya	47.7	42.3	5.4	Bataan	37.6	35.3	2.3
Isabela	44.5	40.4	4.1	Abra	37.4	35.6	1.8
Pangasinán	43.1	40.4	2.7	Ilocos Sur	37.0	35.6	1.4
Paragua Sur	43.1	32.7	10.4	La Unión	37.0	35.4	1.6
Benguet	42.6	38.8	3.8	Samar	36.8	30.8	6.0
Tarlac	42.6	40.0	2.6	Paragua	36.6	30.8	5.8
Cagayán	42.3	38.3	4.0	Pampanga	36.5	35.3	1.2
Lepanto-Bontoc	40.7	33.0	7.7	Albay	36.1	32.1	4.0
Rizal	40.4	38.4	2.0	Batangas	36.1	34.7	1.4
Cavite	40.3	34.9	5.4	Dapitan	36.1	35.2	0.9
Davao	40.1	35.5	4.6	Bulacán	36.0	34.2	1.8
La Laguna	40.0	38.4	1.6	Antique	35.2	28.5	6.7
Tayabas	40.0	38.3	1.7	Surigao	35.2	34.9	0.3
Zambales	40.0	35.7	4.3	Cápiz	34.1	26.9	7.2
Nueva Ecija	39.8	34.2	5.6	Masbate	34.0	27.3	6.7
Cottabato	39.6	21.4	18.2	Basilan	33.9	26.0	7.9
Ilocos Norte	38.9	36.5	2.4	Iloilo	33.7	29.6	4.1
Manila city	38.9	33.7	5.2	Negros Oriental	32.7	29.7	3.0
Ambos Camarines	38.7	32.7	6.0	Leyte	32.2	29.3	2.9
Tawi Tawi	38.7	38.7		Marinduque	32.2	31.4	0.8
Mindoro	38.5	33.5	5.0	Cebu	31.4	29.8	1.6
Romblón	38.2	34.6	3.6	Zamboanga	31.0	28.6	2.4
Siasi	38.1	33.4	4.7	Bohol	30.9	30.6	0.3
Sorsogón	38.0	34.8	3.2	Misamis	30.7	29.9	0.8

An examination of the column of legally married shows a range in the proportion of from 21.4 per cent in Cottabato up to 42.9 per cent in Joló. In the civil provinces, however, the range was by no means as great, being from 26.9 per cent in Cápiz up to 42.3 per cent in Nueva Vizcaya. The proportion of the legally married in the Visayan provinces was small as compared with those of the other provinces, thus showing the converse of the case with the single.

To some extent the differences in the proportions of the legally married are corrected by the addition of those consensually married. The proportion in this latter class showed a very wide range, being among the civil provinces least in Bohol and Surigao, where it was three-tenths of 1 per cent, and greatest in Negros Occidental, where it was 8.4 per cent. Among the military districts it ranged still higher, being among the few inhabitants of Cottabato district not less than 18.2 per cent.

Among the yellow people nearly all the widowed were males. Among the white people also there were more males than females, although this proportion was by no means as large as was to have been expected. Among the Filipinos the proportion of widows was on the average about double that of widowers. This proportion was exceeded in the case of the Bicol, Cagayanes, Tagálogs, and Zambalans, while among the other tribes it was less than double. The largest proportion of widows to widowers was found among the Bicol, and the least among the Pampangans.

The following table shows the proportion which the widowed bore to the total population, by provinces and comandancias:

Proportion of the widowed to total population.

PROVINCE OR COMANDANCIA.	Per cent.	PROVINCE OR COMANDANCIA.	Per cent.
Iloilo	10.4	La Unión	6.8
La Laguna	10.2	Zambales	6.7
Batangas	10.1	Paragua	6.6
Rizal	9.6	Misamis	6.4
Nueva Vizcaya	9.0	Tarlac	6.4
Cápiiz	8.8	Albay	6.3
Batán	8.4	Paragua Sur	6.3
Bulacán	8.4	Zamboanga	5.9
Cavite	8.4	Marinduque	5.8
Tayabas	8.0	Negros Oriental	5.7
Ilocos Sur	7.9	Bohol	5.6
Ilocos Norte	7.7	Leyte	5.4
Manila city	7.7	Benguet	5.3
Negros Occidental	7.5	Dávao	5.3
Nueva Ecija	7.5	Sorsogón	5.3
Pampanga	7.4	Surigao	5.0
Mindoro	7.3	Dapitan	4.9
Antique	7.2	Masbate	4.9
Ambos Camarines	7.1	Romblón	4.9
Cagayán	7.1	Cebu	4.7
Abra	7.0	Lepanto-Bontoc	4.7
Pangasinán	7.0	Joló	4.5
Samar	7.0	Cotabato	4.3
Isabela	6.9	Siassi	2.0
Basilan	6.8	Tawi Tawi	

Among the civil provinces the widowed ranged from 4.7 per cent in Cebu up to 10.4 per cent in Iloilo. Batangas and La Laguna also had a large proportion of widowed. It will be seen by comparing this column of widowed with the death rate of these provinces in 1902 that there was a very close accordance, thus indicating the cause of the large proportion of widowed.

LITERACY.

The following table shows, by provinces and districts, the proportion of widows to widowers, expressed in the number of the former to 100 of the latter:

Proportion of widows to widowers.

PROVINCE OR COMANDANCIA.	Number of widows to 100 widowers.	PROVINCE OR COMANDANCIA.	Number of widows to 100 widowers.
Cápiz.....	333	Cagayán.....	186
Davao.....	305	Cebu.....	184
Paraguá.....	241	La Unión.....	184
Antique.....	236	Lepanto-Bontoc.....	180
Romblón.....	234	Surigao.....	180
Batangas.....	232	Bulacán.....	178
Albay.....	231	Samar.....	178
Ambos Camarines.....	230	Pampanga.....	176
Mindoro.....	228	Rizal.....	175
Iloilo.....	225	Tarlac.....	175
Ilocos Norte.....	221	Masbate.....	173
Nueva Vizcaya.....	219	Isabela.....	168
Cavite.....	217	Negros Oriental.....	167
Tayabas.....	215	Leyte.....	166
Zambales.....	213	Batán.....	160
Marinduque.....	206	Negros Occidental.....	157
La Laguna.....	202	Misamis.....	153
Manila city.....	199	Zamboanga.....	145
Dapitan.....	196	Paraguá Sur.....	115
Pangasinán.....	192	Cottabato.....	102
Sorsogón.....	192	Siassi.....	100
Abra.....	191	Benguet.....	92
Nueva Ecija.....	189	Basilan.....	88
Bohol.....	188	Joló.....	78
Ilocos Sur.....	188		

In Basilan, Benguet, and Joló the proportion of widows was smaller than that of widowers. These areas are sparsely populated and the figures are not significant. In all of the other provinces and districts it was either equal to it or greater, and in some cases very much greater, as in Cápiz, where there were 333 widows to 100 widowers.

LITERACY.

In the population schedule, questions Nos. 14, 15, and 16 relate to the degree of literacy, asking whether the person can read, can write, and has superior education. As this matter is of much importance special reference was made to it in the instructions to the enumerators in these words:

If the enumerator has a doubt as to the ability of a person to read or write he will ask him to do so in his own language or dialect—in English, or Spanish.

In addition to this, special instructions were sent to all the enumerators, as follows:

As the question of literacy is a very important one, and as, for that and other reasons, it is desirable that the data collected by the enumerators in respect thereto be beyond suspicion, their attention will be especially directed to paragraph 38 of their instructions, and they will be cautioned to test the capacity of all persons to read and write, unless satisfied beyond a doubt that they are able to do so,

The fact must be impressed that literacy among the people of the Philippines meant the ability to read and write in any language—English, Spanish, or a Malay tongue. Since, in all probability, less than 10 per cent of the people of the islands could speak Spanish or English, the fact is unquestionable that the majority of the people reported as literate could read and write only the native tongues. This is a result of the policy of the friars, who, from motives of their own, discouraged the learning of Spanish by the natives, in order that they might act as intermediaries between the people and the civil authorities, and thus retain their influences over their charges.

The population 10 years of age and over numbered 4,973,526. In respect to literacy this element of the population may be divided into two groups: First, those who could neither read nor write in any language, numbering 2,762,093, which was 55.5 per cent, or considerably more than one-half of the population over 10 years of age; second, those who could read in any language. This latter class numbered 2,211,433, and constituted 44.5 per cent of the inhabitants 10 years of age and over. The class who were able to read may in turn be divided into two parts, those able to read but not write, and those able to read and write. Those who were able to read but not write numbered 1,208,845, which was 24.3 per cent, or a little less than one-quarter of all the inhabitants 10 years of age and over. Those able to both read and write numbered 1,002,588, and constituted 20.2 per cent, or about one-fifth of those who were at least 10 years of age. In this part of the population was included a small element who had received superior education. They numbered only 76,627, or 1.6 per cent of the population over 10 years of age.

The degree of literacy of these people may be measured by comparing the proportion of those who could read and write, namely, 20.2 per cent, with a corresponding proportion in Porto Rico, where it was 20.4 per cent in 1899, and in the United States, where it was 89.3 per cent in 1900.

A significant fact is brought out by the above figures. In the United States, Cuba, and in Porto Rico the number of those who could read but could not write did not differ greatly. Nearly all those who could read could also write, but here in the Philippines the number of those who could read was considerably more than twice as great as the number who could read and write, the proportion being 44.5 to 20.2 per cent. This is probably due to the fact that education under the friars was in great part limited to teaching the people to read.

A study of the distribution of literacy between males and females develops the following facts. The total number of males 10 years of age and over was 2,473,777; of females, 2,499,749. The total num-

POPULATION 10 YEARS OF AGE AND OVER CLASSIFIED AS TO DEGREE OF LITERACY BY AGE AND SEX

ber of males 10 years of age and over who could neither read nor write was 1,311,852, or 53 per cent of the total number of males of that age. The total number of females was 1,450,241, or 58 per cent of the females of that age. From this it appears that inability to read and write was more common among females than among males, there being 5 per cent more of that sex in this class.

There were 1,161,925 males who were able to read, constituting 47 per cent of all males 10 years of age and over. In other words, nearly one-half of the males could read. The number of females able to read was 1,049,508, or 42 per cent of all the females 10 years of age and over, a proportion considerably less than of males. Of all those who could read, males constituted 52.5 per cent and females 47.5 per cent.

The number of males who could both read and write was 735,564, or 29.8 per cent of the male population 10 years of age and over. The number of females who could both read and write was only a little more than one-third as great, being 267,024, or only 10.7 per cent of the females 10 years of age and over.

From the above it appears that while nearly two-thirds of the males who were taught to read were also taught to write, only about one-fourth of the females received an equal degree of education. Far less attention evidently has been paid to the education of women in the Philippines than to that of men. In the United States, Cuba, and Porto Rico literacy, by which is meant the ability to both read and write, was somewhat lower among females than among males—that is, a slightly larger proportion of those who were taught to read were also taught to write among males than among females, but the proportion there was only a fraction of that which prevailed in the Philippines.

The number of males reported as having received superior education was 59,020, or 2.4 per cent of those 10 years of age and over, and of the females 17,607, or seven-tenths of 1 per cent. It is thus seen that superior education among males was nearly three and a half times as great as among females.

The following table shows, by provinces and comandancias, the proportion of the population 10 years of age and over who could read. The range was very great, from 15.2 per cent in Dávao up to 71.5 per cent in Bulacán, Bulacán being the banner province, having a higher percentage of those who could read than even Manila with its large white element. The third province was the Bicol one of Sorsogón, and then followed a series of Tagálog provinces. Most of the Visayan provinces were low in the list.

Proportion of those who could read.

PROVINCE OR COMANDANCIA.	Percent.	PROVINCE OR COMANDANCIA.	Percent.
Bulacán.....	71.5	Leyte.....	42.8

The following table shows the proportion of all males 10 years of age and over who could read. Here, as in the case of the total population 10 years of age and over, Bulacán is at the head with 75.2 per cent, exceeding even the city of Manila. More than three-fourths of its male population 10 years of age and over could read. At the other end of the list is Dávao, only about one-sixth of whose male inhabitants 10 years of age and over could read.

Proportion of males who could read.

DEGREE OF LITERACY BY PROVINCES

Contrasting the last three tables, or those which show the proportion 10 years of age and over who could both read and write, with the three which precede them, showing the proportion who could read only, it is seen that there were wide differences among the different provinces in the proportion that could read but not write. As a rule the "can reads" ranged from twice to three times the "can writes," but there were some surprising exceptions. In Manila the proportion of "can writes" was large relatively to the "can reads." In Bataán and Batangas it was very small. The eccentricities in the case of the sparsely populated provinces of Benguet, Lepanto-Bontoc, and of the comandancias were not significant because of the small population involved.

The following table shows the proportion of the total population 10 years of age and over who had superior education. The province of Benguet and the comandancias of Siassi and Cottabato had a small population, and their position at the head of the list is not significant. Nine per cent of the people of Manila enjoyed superior education, while, at the foot of the list, it is seen that in Sámar only one-tenth of 1 per cent, or one person in a thousand, had received this degree of education.

Proportion of those having superior education.

PROVINCE OR COMANDANCIA.	Per cent.	PROVINCE OR COMANDANCIA.	Per cent.
Benguet	13.3	Cavite	1.1

Basilan	1.9	Negros Oriental	0.3
Batán	1.9	Samar	0.2
Cavite	1.8	Surigao	0.2
Tayabas	1.8	Samar	0.0

The following table shows the proportion of females 10 years of age and over possessing superior education. Here Siassi and Benguet head the list followed by Manila, the latter with 6 per cent. The column closes with Surigao, with but one person in a thousand possessing superior education. This table may be contrasted with the preceding one relating to males. In general the order of the provinces is pretty nearly the same. The proportion of females was in every case less than that of males:

Proportion of females having superior education.

PROVINCE OR COMANDANCIA.	Per cent.	PROVINCE OR COMANDANCIA.	Per cent.
Siassi	8.9	Lepanto-Bontoc	0.5
Benguet	7.2	Isabela	0.5
Manila city	6.0	Tayabas	0.5
Cottabato	3.7	Abra	0.4
Joló	2.4	Albay	0.4
Sorsogón	1.7	Cavite	0.4
Iloilo	1.6	Ambos Camarines	0.3
Paragua Sur	1.3	Cagayán	0.3
Rizal	1.3	Cápiz	0.3
Pangasinán	0.9	Leyte	0.3
Dávao	0.8	Masbate	0.3
Ilocos Norte	0.8	Nueva Vizcaya	0.3
Ilocos Sur	0.8	Batangas	0.2
Negros Occidental	0.8	Cebú	0.2
Pampanga	0.8	Mindoro	0.2
Tarlac	0.8	Paragua	0.2
Zambales	0.7	Romblón	0.2
Nueva Ecija	0.7	Zamboanga	0.2
Basilan	0.7	Antique	0.1
Bulacán	0.7	Bohol	0.1
Batán	0.6	Dapitan	0.1
La Laguna	0.6	Misamis	0.1
La Unión	0.6	Negros Oriental	0.1
Marinduque	0.6	Surigao	0.1

The following table shows the proportion which males and females who could neither read nor write in each age group bore to the total males or females of that group:

AGE PERIOD.	Male.	Female.	AGE PERIOD.	Male.	Female.
10 to 14 years	51.8	53.0	35 to 44 years.....	53.1	60.0
15 to 17 years.....	51.9	51.5	45 to 54 years.....	55.7	64.5
18 to 20 years.....	54.6	55.0	55 to 64 years.....	58.6	70.0
21 to 24 years.....	46.4	51.2	65 years and over	63.8	75.2
25 to 34 years.....	50.5	56.5			

The above table shows that with both sexes, and more especially the females, the proportion of those who could not read and write increased with advancing age, indicating that in past years the facilities for education were much less than at present, and that this statement applies with particular force to females. As indicated by the proportions of those of the sexes under the age of 20 who could not read and write, it appears that in more recent years these facilities have been about equal for the sexes, and have been availed of in very nearly equal measure by girls and boys. Above the age of 20, however, the proportions of the sexes departed widely from one another, so that in the oldest age group, 65 years and over, while less than two-thirds of the men were unable to read and write, a little over three-fourths of the women were in that condition.

The following table shows by sex and age groups the proportional part of the population in each sex group that was able to read:

AGE PERIOD.	Male.	Female.	AGE PERIOD.	Male.	Female.
10 to 14 years	48.2	47.0	35 to 44 years.....	46.9	40.0
15 to 17 years.....	48.1	48.5	45 to 54 years.....	44.3	35.5
18 to 20 years.....	45.4	45.0	55 to 64 years.....	41.4	30.0
21 to 24 years.....	53.6	48.8	65 years and over	36.2	24.8
25 to 34 years.....	49.5	43.5			

This table is simply the converse of the table above, the figures being the difference between those in the table referred to and 100 per cent. What has been said about the former table applies equally well to this.

The following table shows for each sex and age group the proportion that persons able to read and write in each group bore to the total population of that group:

AGE PERIOD.	Male.	Female.	AGE PERIOD.	Male.	Female.
10 to 14 years.....	20.6	10.7	35 to 44 years.....	32.6	10.0
15 to 17 years.....	27.9	13.2	45 to 54 years.....	30.4	7.6
18 to 20 years.....	29.0	12.2	55 to 64 years.....	27.1	5.4
21 to 24 years.....	38.5	15.7	65 years and over	21.9	4.4
25 to 34 years.....	34.5	11.8			

This table represents a more advanced stage of education than the similar one relating to those who could read only, and besides showing smaller proportions in each age group it develops other points of difference. Among males the maximum proportion was found in the age group 21 to 24 years, the proportion increasing up to that point, and thence diminishing with advancing years. Females followed a similar course, but in the earlier years the proportion was only about one-half that of males, and that proportion constantly diminished, relatively to males, until at the greatest age, 65 years and over, the proportion of women who could read and write was only about one-fifth of that of men. This again shows that in recent years much more opportunity has been afforded women for education.

The following table shows by sex and age periods the proportion which those who acquired superior education bore to the total of each group:

AGE PERIOD.	Male.	Female.	AGE PERIOD.	Male.	Female.
10 to 14 years	0.5	0.2	35 to 44 years.....	3.2	0.8
15 to 17 years	1.6	0.8	45 to 54 years.....	2.8	0.6
18 to 20 years	1.9	0.7	55 to 64 years.....	2.0	0.4
21 to 24 years	3.6	1.3	65 years and over	1.4	0.3
25 to 34 years	3.4	1.0			

Here, as in the case of those who could both read and write, the maximum proportion of both males and females was found in the age group between 21 and 24 years, while the proportion in the succeeding age group—25 to 34 years—stood next, the proportion steadily diminishing from that time to the greatest age, thus illustrating the fact that in higher education, as in elementary education, greater facilities have been afforded in more recent years.

Here, again, as above shown, women have received very much less opportunity for advancement than men, or, at least, have availed themselves of the opportunity in much less degree, for in the early age periods the proportion of women possessing superior education was half or less than half that of men, while in the later age periods the proportion diminished rapidly to about one-fifth of that of men.

SCHOOL ATTENDANCE.

In column 12 of the population schedule, in which the occupations of the people were entered, the number of those attending school was given as 811,715, and by column 13 of the schedule, those who attended school were classified by the number of months of such attendance during the last school year. The number of persons who appear upon the population schedule as having attended school is more than double the number reported as attending school upon the school schedule

(356,385), showing that the enumerators of the population must have misunderstood the question upon the population schedule, and reported the number who attended school during the calendar year 1902 rather than the school year just ending. Since the calendar year does not conform to the school year, the latter ending in March, it is believed that the returns of the population schedule really cover the school attendance for two years and possibly more. In other words this number, 811,715, probably includes all persons who had attended school since the establishment of the American system of public schools. An analysis of the figures goes to show that this is probably true in all parts of the archipelago, except the city of Manila, where a comparison of the figures appears to indicate that the enumerators interpreted the schedules correctly. Under the theory that these returns indicate persons who have attended schools during the American régime, the figures will be discussed on the following pages.

The number above quoted as attending school, 811,715, consisted almost entirely of brown people, there being but five in a thousand of other races. The number was 11.6 per cent of the entire population.

Classified by sex, the school attendance consisted of 443,012 males and 368,703 females, the two sexes being in the proportions of 54.6 and 45.4 per cent. A comparison of these proportions with the proportions of the two sexes who could read may be significant. The latter were 52.6 for males and 47.4 per cent for females, the difference, 2 per cent in each case, being in favor of the females.

In the following table the school attendants are classified by age, both as to total, males and females:

AGE PERIOD.	Total.	Male.	Female.
Under 5 years	0.1	0.1	0.1
5 to 9 years	39.3	37.7	41.1
10 to 14 years	50.7	51.0	50.5
15 to 17 years	8.8	9.8	7.5
18 to 20 years	0.8	1.0	0.6
21 years and over	0.3	0.4	0.2

It is seen from the above table that persons under 5 and over 17—that is, below and above school age—contributed little to the school attendance. Of the total school attendance 98.8 per cent were children of school age; of boys 98.5 per cent, and of girls 99.1 per cent, being of school age. More than one-half of the children were between the ages of 10 and 14 years.

Of the total number of children of school age 37.5 per cent attended school. The proportion of males was greater than that of females, there being of the former 40.1 per cent, and of the latter 34.8 per cent. Dividing up the children of school age who attended school into the age groups used above, it appears that of the children between the

ages of 5 and 9 years, 33.2 per cent attended school; of the next group, 10 to 14 years, no less than 54.8 per cent, or considerably more than one-half, attended school, while of the third age, 15 to 17 years, only 16.7 per cent, or about one-sixth, attended school.

Of the children between 10 and 14 years of age, 411,763 attended school, while by Table 43 it appears that a less number, 357,659, could read. This result was to be expected, since a certain number of these children had just commenced school attendance. The age group 15 to 17 years told a different story. In this group, 71,267 attended school, while nearly three times as many, 205,709, were able to read. This group contained many persons who, having attended school and acquired the rudiments of education, had discontinued attendance and adopted some other avocation.

Of the number reported as having attended school more than one-half, namely, 55.5 per cent, were reported as having attended for six months or more. Those attending four to five months formed 14.5 per cent; those attending two to three months, 21.6 per cent; those attending less than one month, 7.5 per cent of the total, the remainder being unknown.

The following table shows the proportion between the number of children of school age, 5 to 17 years, in each province, and the number of children of that age who attended school. Benguet and Lepanto-Bontoc are intentionally omitted, because of their small population, coupled with the fact that many children of wild peoples attended school.

CITIZENSHIP AND LITERACY.

The total number of males of voting age—that is, 21 years and over—was 1,677,525. This was 24 per cent, or a little less than one-fourth, of the total Christian population. Of this number, 1,137,776, or 67.8 per cent, were illiterate, and 539,749, or 32.2 per cent, were able to read

and write. Thus it appears that the proportion of literates and illiterates among this class of the population was very nearly in the proportion of two-thirds and one-third. The number having superior education was 50,140, or 3 per cent.

The following table classifies the males of voting age by citizenship, giving the number and percentage of the total number. It also gives the proportion of literates—that is, of those who could read and write—of each class. It appears from this that 97 per cent of the males of voting age were of Filipino citizenship; that 2.3 per cent were Chinese, leaving only seven-tenths of 1 per cent for all other nationalities, of which more than half were American.

It appears, further, that a little less than one-third of the Filipino males of voting age were able to read and write, while nearly one-half of the Chinese and nearly four-fifths of the Japanese possessed that degree of education. Among the whites of various nationalities the proportion of literates exceeded 93 per cent, and among Germans, Americans, and Spaniards it was practically 99 per cent.

CITIZENSHIP.	Number.	Per cent.	Per cent literate.
Total	1,677,525	100.0	
Filipino	1,627,186	97.0	31.4
Chinese	38,379	2.3	45.6
Japanese	438	0.1	79.5
English	619		93.7
German	280		98.9
French	101		96.0
American	6,791	0.4	99.3
Spanish	3,295	0.2	99.2
Other	436		

The following table shows, for each of the civilized tribes, the number and proportion of the illiterate and literate males 21 years of age and over, and those having superior education, the last being, of course, included in the literate:

CIVILIZED TRIBE.	Illiterate.	Per cent.	Literate.	Per cent.	Superior education.	Per cent.
Bicol	87,357	64.8	47,493	35.2	3,167	2.3
Cagayan	21,796	64.8	11,850	35.2	581	1.7
Ilocano	146,120	71.3	58,814	28.7	6,617	3.2
Pampangan	36,239	51.6	33,986	48.4	1,971	2.8
Pangasinan	50,188	65.9	26,025	34.1	2,602	3.4
Tagalog	208,195	56.9	157,537	43.1	13,961	3.8
Visayan	553,731	76.8	167,540	23.2	11,850	1.6
Zambalan	7,166	62.4	4,318	37.6	396	3.4

It appears from the above that the most literate tribe of the provinces was the Pampangan, 48.4 per cent of whose males of voting age were able to read and write. Next to the Pampangans were the Tagálogs, with 43.1 per cent, while the lowest, according to this measure, were the Visayans, with only 23.2 per cent. Measured by the proportion having superior education, the Tagálogs were easily first, followed

by the Pangasinanes and Zambalans, while the Visayans were still at the foot of the column.

It will be remembered that out of the total population over 10 years of age, 20 per cent could read and write, while, as above stated, of the Filipino males of voting age, not less than 31.4 per cent were literate in the same degree. This great difference in the state of literacy between the population 10 years of age and over and the Filipino males of voting age is, however, almost entirely due to the inclusion of females in the first class. Confining the comparison to males, it appears that of males 10 years of age and over 29.7 per cent were literate, being nearly as large a proportion as of the males of voting age.

The municipalities of the Philippines have been grouped in accordance with the degree of literacy among the males of voting age as follows: First, those in which less than 25 per cent could read and write; second, those in which the proportion was between 25 and 33 per cent; third, those in which the proportion was between 33 and 50 per cent; fourth, those in which it was between 50 and 67 per cent. There were 375 municipalities in which less than one-fourth of the males of voting age could read and write. In the second class there were 264 municipalities; in the third class, 253; in the fourth class, 58; while in 10 municipalities more than two-thirds of the males of voting age could read and write. These 10 municipalities were as follows: Cavite, in Cavite province; Lumban, Paete, and Rizal, in La Laguna province; Santo Tomás, in Pampanga province; Alabat, Atimonan, Calauag, López, and Maubán, in Tayabas province. As is seen, 5 of these are in Tayabas province and 3 in La Laguna.

The map showing the proportion of literacy among the male Filipinos of voting age was prepared by plotting the figures for municipalities. It shows a high degree of literacy in the Tagalog provinces generally, and especially in Tayabas and La Laguna; also in parts of the great valley of Luzón, notably in the neighborhood of the Manila-Dagupan Railway, thus illustrating the influence of the railway as a civilizing agency.

The following table shows the proportion of the male Filipinos of voting age who could read and write in each province and military district. Naturally Manila shows the highest proportion, since the facilities for education are far greater there, and the educated classes have, moreover, been attracted to the city. The proportion exceeded three-fifths of all males of voting age. In the sparsely peopled province of Benguet and in Tayabas more than half the males of voting age were literate. It will be noted that the Tagalog provinces and the province of the Pampangans stand high in this list, while the foot of the list is occupied almost entirely by the Visayan provinces. Notable exceptions are to be made, however, to this in the case of Batangas and Mindoro, both Tagalog provinces, which stand low.

Proportion of literate among Filipino males 21 years of age and over.

PROVINCE OR COMANDANCIA.	Per cent.	PROVINCE OR COMANDANCIA.	Per cent.
Manila city	61.6	Mindoro	31.1

Tayabas	2.0		

The following table presents, by provinces and comandancias, the proportion, under different conditions of literacy, of the males of voting age. It is arranged in the order of the "can reads," or the inverse order of those who could neither read nor write. In this table it will be seen that the province of Pampanga stands high, and that in general the Tagalog provinces occupy a similar position. The Visayan provinces stand low in the scale. It will also be seen that

there is a wide range and great irregularity in the third column, containing those who can read but not write, a fact which is probably due to irregularity in the policies of the various church orders concerning the degree of education which was permitted the people.

Different conditions of literacy of males of voting age.

OCCUPATIONS.

The occupations of the Filipinos are few in number and present little variety. There is little cooperative work, very little use of machines, and little specialization of function. A majority of the male Filipinos farm on a small scale, those living near the coast alternating that occupation with fishing. Most of the women who were returned as having occupations were spinners and weavers, weaving

in their homes on hand looms the beautiful, delicate fabrics known as *jusi*, *piña*, and *sinamay*. They weave also hats and mats of the finest quality, all this work being done in a small way as a household occupation, alternating with the duties of housekeeping.

With this introduction the reader will be prepared for the statement that a large proportion of the people, much larger than in the United States, or in almost any other country, were reported as engaged in gainful occupations. Indeed, out of a civilized population of 6,987,686 in the Philippine Islands, no less than 3,037,880, or 43.5 per cent, were in this class, as compared with 36.3 per cent in the United States, 33.1 per cent in Porto Rico, and 39.6 per cent in Cuba. This excessive proportion was, however, due to the large number of women workers, namely, 1,025,287, as is shown by the following table, in which the proportions of wage-earners among the males and the females are given for the above four countries:

COUNTRY.	Male.	Female.
Philippine Islands.....	57.6	29.4
United States.....	58.7	12.8
Porto Rico.....	56.9	9.9
Cuba.....	68.2	8.8

From the above table it appears that the proportion of women engaged in gainful occupations in the Philippines was more than double that of the United States, three times that of Porto Rico, and more than three times that of Cuba, while the proportion of working males was about equal to that in the United States and Porto Rico, and less than in Cuba.

Persons not engaged in gainful occupations include women engaged in housework, children at school, and other dependents.

The following table shows the proportion of the wage-earners in each age group to the total population, and with it, for comparison, corresponding figures from the census of 1899 for Cuba and Porto Rico:

AGE PERIOD.	Philippine Islands.	Cuba.	Porto Rico.	AGE PERIOD.	Philippine Islands.	Cuba.	Porto Rico.
10 to 14 years.....	16.8	24.6	22.4	45 to 54 years.....	72.5	60.3	55.4
15 to 24 years.....	66.9	52.5	51.8	55 to 64 years.....	65.8	59.5	53.2
25 to 34 years.....	72.4	58.5	54.3	65 years and over..	42.7	52.0	44.5
35 to 44 years.....	74.3	60.4	56.9				

It is seen from the above table that in the Philippine Islands about one-sixth of the persons in the lowest age group (10 to 14 years) were wage-earners. The number increased rapidly up to the age group 35 to 44 years, after which the proportion diminished. Between the ages of 15 and 65 nearly two-thirds, at least, of the population were of the producing class.

Comparing these figures with the corresponding figures for Cuba and Porto Rico, it is seen that the proportions of wage-earners in the first and last age groups were smaller than in these West Indies; that is, the proportion of producers was not as great in younger and more advanced years, but in the years of early manhood and maturity, and even up to 65 years of age, the proportion was greater, the maximum of the Philippine Islands being, as stated above, nearly three-fourths, while in Cuba it was but three-fifths, and in Porto Rico still less.

The following table shows the proportion of wage-earners among the male population, classified by age groups, and with it a similar classification for the United States in 1900, and for Cuba and Porto Rico in 1899:

AGE PERIOD.	Philippine Islands.	United States.	Cuba.	Porto Rico.
10 to 14 years.....	19.4	26.1	44.0	35.5
15 to 24 years.....	86.8	83.9	95.0	92.1
25 to 34 years.....	98.5	96.3	98.5	97.6
35 to 44 years.....	98.6	96.6	98.3	97.4
45 to 54 years.....	97.9	95.5	97.5	96.2
55 to 64 years.....	92.7	90.0	96.2	94.6
65 years and over.....	65.6	68.4	90.2	86.6

From the above table it is seen that in the youngest age group (10 to 14 years) about one-fifth of the males in the Philippines were wage-earners; that in the period 15 to 24 years there was an enormous increase in the proportion, which rose to 86.8 per cent, or, in other words, nearly seven-eighths of all the males came into the producing class. From this point the proportion rose more gradually until it reached its maximum in the age period 35 to 44 years, where all except 1.4 per cent of the males were wage-earners. From this point the proportion of productive males diminished until in the oldest age group, 65 years and over, less than two-thirds of the males were in this class.

Comparing these with corresponding figures for Cuba and Porto Rico, it is seen that in the last age group the proportion was much less than in either of these countries. In the next oldest group it exceeded the proportion in the United States, but was less than in Cuba and Porto Rico. The highest proportion in the Philippine Islands was higher than in any of these countries. The maximum proportion was reached in the United States in the same age group as in the Philippines, but in Cuba and Porto Rico in the age group preceding 35 years. On the other hand, with increasing age the proportion diminished more rapidly in the Philippines than in the other countries under discussion.

The following table shows, for females, the proportion of wage-earners to the population in each age group, and with it, for comparison, corresponding figures for the United States, Cuba, and Porto Rico:

AGE PERIOD.	Philippine Islands.	United States.	Cuba.	Porto Rico.
10 to 14 years.....	14.0	10.2	4.5	8.0
15 to 24 years.....	50.2	31.6	10.9	16.8
25 to 34 years.....	46.9	19.9	12.7	14.7
35 to 44 years.....	47.2	15.6	14.6	15.5
45 to 54 years.....	46.1	14.7	15.6	14.7
55 to 64 years.....	36.2	13.2	15.8	12.3
65 years and over.....	19.3	9.1	13.3	8.0

In the column relating to the Philippines it is seen that about one-seventh of the females between the ages of 10 and 14 years were engaged in gainful occupations; in the next group about one-half of them, and this was the maximum for the sex. The proportion diminished from this point on, until, in ages exceeding 65 years, less than one-fifth of the women were engaged in gainful occupations.

The proportion of female wage-earners was greater in the Philippines than in either of the other countries here discussed. The maximum proportion in the United States was reached in the age group between 15 and 24 years, where the proportion of occupied females was less than one-third of all females. In Cuba the proportion of females continued to increase until it reached 15.8 per cent in the age group 55 to 64 years, and that maximum was less than one-sixth of all females. In Porto Rico the maximum was reached in the same age group as in the Philippines and the United States (15 to 24 years), when the proportion was about one-sixth of all the females.

The general conclusion from this table is that at all ages the proportion of females who were wage-earners was much greater than in either the United States, Cuba, or Porto Rico, a condition which is explained in part, as has been pointed out above, by the fact that a large proportion of women assist in supplying the family exchequer by spinning and weaving, and to a less extent by working in the fields.

The following table shows the proportions existing between male and female wage-earners in different age groups:

AGE PERIOD.	Male.	Female.	AGE PERIOD.	Male.	Female.
10 to 14 years.....	59.6	40.4	45 to 54 years.....	68.8	31.2
15 to 24 years.....	59.3	40.7	55 to 64 years.....	73.8	26.2
25 to 34 years.....	67.3	32.7	65 years and over.....	77.6	22.4
35 to 44 years.....	69.9	30.1			

It is seen that in the lowest age group, 10 to 14 years, the proportions were about three-fifths males and two-fifths females, and in the next age group the proportion of females increased slightly, then diminished until in the age group 65 years and over there were about three and one-half males to each female.

As has been pointed out, the population of the Philippines is very homogeneous, consisting almost entirely of brown people, and this being the case, the conclusions that have been derived from the entire population hold true for the brown people also. Therefore it is not necessary to classify them separately.

The yellow people were nearly all males. The proportion of females was so small in this race that it is unnecessary to make special mention of them. The discussion will therefore be confined to the males, since any conclusions derived regarding the females would be misleading. Of the males, 98.3 per cent were engaged in gainful occupations and 1.7 per cent only were nongainful.

The following table gives the proportion which the wage-earning males bore to all males of this race:

AGE PERIOD.	Per cent.	AGE PERIOD.	Per cent.
10 to 14 years.....	54.2	45 to 54 years.....	99.1
15 to 24 years.....	98.5	55 to 64 years.....	96.6
25 to 34 years.....	99.5	65 years and over.....	82.4
35 to 44 years.....	99.4		

It is seen that even in the lowest age group (10 to 14 years) more than one-half of the yellow people were wage-earners, and the proportion rose until from 25 to 34 years it reached 99.5 per cent. From this point it diminished, but even at ages exceeding 65 years nearly five-sixths of the people were of the producing class.

The whites living in the Philippines were nearly all males, and for the same reason as stated above about the females of the yellow race, it is inadvisable to attempt any discussion of the female whites. Of the male whites, 93.4 per cent were wage-earners, and the following table shows the proportion which these wage-earners in each age group bore to the total male population of that group:

AGE PERIOD.	Per cent.	AGE PERIOD.	Per cent.
10 to 14 years.....	9.3	45 to 54 years.....	98.8
15 to 24 years.....	95.6	55 to 64 years.....	97.5
25 to 34 years.....	98.4	65 years and over.....	90.4
35 to 44 years.....	98.6		

From the above it appears that less than one-tenth of the males in the age group 10 to 14 years were wage-earners. In the next group, however, the proportion leaped to 95.6 per cent, and then increased slowly to a maximum in the group 45 to 54 years, where 988 out of every thousand were of the producing class. From thence the proportion diminished, but even in the group of greatest age (65 years and over) more than nine-tenths were wage-earners.

The following table shows the percentage of the total wage-earners, of the males and of the females, which was contained in each age group:

AGE PERIOD.	Total.	Male.	Female.	AGE PERIOD.	Total.	Male.	Female.
10 to 14 years	4.1	3.7	5.0	45 to 54 years.....	11.5	11.9	10.6
15 to 24 years	27.6	24.7	33.3	55 to 64 years.....	7.7	8.6	6.0
25 to 34 years	27.4	27.8	26.5	65 years and over	3.2	3.7	2.1
35 to 44 years	18.5	19.6	16.5				

Of the total wage-earners those under 15 years and over 65 contributed but very small proportions. The largest proportions came from youth to early manhood—that is, between the ages of 15 and 35. Those ages contributed 55 per cent of all the wage-earners, while between 15 and 55 years were found not less than 85 per cent of all the wage-earners.

As was the case with the total wage-earners the males under 15 and over 65 years constituted but small proportions of the total number. The largest proportion was between 25 and 35 years, while between 15 and 35 were found more than one-half of the male wage-earners, and between 15 and 55 years five-sixths of them.

Of the female wage-earners small proportions only were found under the age of 15 or over 55. The largest proportion was composed of young women between 15 and 25 years, which age group contributed not less than one-third of all the female wage-earners. Between 15 and 35 years were found three-fifths of all and between 15 and 55 nearly seven-eighths of all female wage-earners.

POPULATION.

The following table presents the proportion, in each province and military district, of those engaged in gainful occupations and those not thus engaged, arranged in order of magnitude of the former proportion.

Proportion of wage-earners and non-wage-earners to total population.

PROVINCE OR COMANDANCIA.	Wage-earners.	Non-wage-earners.
Tawi Tawi	28.6	71.4
Benguet	23.4	76.6
Manila City	60.6	39.4
Manila City	60.4	39.6

Marikina	37.3	62.7
Nueva Vizcaya	33.9	66.1
Zamboanga	32.8	67.2
Bohol	27.1	72.9

It thus appears that in the comandancias of Tawi Tawi and Siassi, the sparsely populated province of Benguet, and the city of Manila more than three fifths of the people were wage-earners. In the first three, frontier conditions prevailed, and there were few people of the nonproductive class. In Manila there was a large foreign element, and very few young children, which accounted for this extraordinarily large proportion of wage-earners, a proportion far greater than in the United States or in any state of that country. The state most nearly approaching that proportion was Wyoming, with 47.8 per cent. In four other areas the proportion of wage-earners exceeded half the population in Joló and Basilan, which were under frontier conditions, and in Cagayán and Isabela, the two tobacco provinces of the Cagayán valley, where the women and children work in the fields to a large extent. There were but two areas, Bohol and Zamboanga, where the proportion was less than in Porto Rico (33.1 per cent), only three in which it was less than in the United States (36.3 per cent), and only nine in which it was less than in Cuba.

The following table shows, by provinces and comandancias, the proportion which male wage-earners bore to all males:

Proportion of male wage-earners to total male population.

PROVINCE OR COMANDANCIA.	Per cent.	PROVINCE OR COMANDANCIA.	Per cent.
Tawi Tawi.....	90.8	Nueva Ecija.....	57.6
Benguet.....	81.6	Ilocos Sur.....	57.2
Paragua Sur.....	81.5	Tarlac.....	57.2

Iloilo.....	58.8	Antique.....	50.8
Ambos Camarines.....	58.0	Romblon.....	50.8
Mindoro.....	57.7	Bohol.....	49.7

At the head of the list, broken only by Manila, are six military districts and the mountain province of Benguet with its sparse population, all under frontier conditions. Manila, with nearly four-fifths of its males in the productive class, stands far above the well-settled provinces. The nearest approach to it is Rizal, with nearly two-thirds of its males in the productive class. Its proportion, as well as all others below it in the table, was less than in Cuba, 68.2 per cent of whose people were in this class. In the United States the proportion of breadwinners was 58.7 per cent, a proportion which is about midway in the column, while the proportion of Porto Rico was less (56.9 per cent).

Omitting the military districts and Benguet and the city of Manila, which present unusual conditions, the range of proportions is not great, being from 49.7 to 65.7 per cent, or only 16 per cent.

The following table shows the proportion of female wage-earners to the total female population:

Proportion of female wage-earners to total female population.

PROVINCE OR COMANDANCIA.	Per cent.	PROVINCE OR COMANDANCIA.	Per cent.
Benguet	56.6	La Laguna	26.8
Isabela	44.7	Pangasinán	26.1
Cagayán	44.4	Paragua	25.8
Cápiz	41.6	Ambos Camarines	25.6
Batangas	38.8	Albay	25.2
Ilocos Norte	38.2	Negros Occidental	24.7
Mindoro	37.0	Zambales	24.5
Lepanto-Bontoc	35.8	Dapitan	24.0
La Unión	35.5	Tawi Tawi	23.5
Tayabas	35.5	Marinduque	23.3
Romblón	35.4	Nueva Ecija	23.2
Antique	34.5	Tarlac	22.9
Samar	34.1	Masbate	22.8
Iloilo	33.6	Bataan	22.7
Pampanga	33.1	Sorsogón	22.6
Manila city	33.0	Surigao	22.1
Negros Oriental	32.4	Misamis	20.2
Rizal	31.6	Davao	17.0
Bulacán	31.0	Paragua Sur	16.1
Cavite	30.5	Siassi	8.3
Cebu	29.9	Joló	7.3
Abra	29.2	Zamboanga	7.1
Basilan	27.7	Cotabato	6.7
Ilocos Sur	27.6	Bohol	5.9
Leyte	27.6	Nueva Vizcaya	5.2

This table shows a wide range, from 56.6 per cent in Benguet down to 5.2 per cent in Nueva Vizcaya, or 51.4 per cent. This great range may be due to a diversity of reporting among the enumerators, or, and much more probably, to wide variations in the facts in different provinces. It is known, for instance, that it is the general practice in Cagayán and Isabela for women to work in the tobacco fields; that in Cápiz and Batangas, the Iloco provinces, and La Unión they are largely engaged in weaving; and in other provinces in making hats, mats, etc. That such industries are much more general in some provinces than in others is well known. The figures for Benguet, at the head of the list, and for the military comandancias near the foot, are derived from small numbers and have little significance, while most of the women of Nueva Vizcaya are Igorots, who have not generally learned the art of weaving. It is probable that the small proportion in Bohol is due to a misunderstanding of the instructions given to the enumerators of that province, whereby many of the women engaged in weaving were not included. The range of these figures is practically restricted, therefore, to 24.5 per cent, i. e., from 44.7 per cent to 20.2 per cent, which is still much larger than that of the United States.

For purposes of general classification the occupations of the Filipinos have been grouped in a manner similar to that employed in the United States censuses, as (1) agricultural pursuits; (2) professional service; (3) domestic and personal service; (4) trade and transportation; and (5) manufacturing and mechanical pursuits.

The distribution of the wage-earners in the Philippines among these five grand groups of occupations is set forth in the following table, together with similar figures from the censuses of the United States and Cuba, for purposes of comparison:

OCCUPATION GROUP.	Philippine Islands.	United States.	Cuba.
Agricultural pursuits	41.3	35.7	48.1
Professional service	0.8	4.3	1.4
Domestic and personal service	18.8	19.2	22.8
Trade and transportation	7.5	16.4	12.8
Manufacturing and mechanical pursuits	31.6	24.4	14.9

It will be seen from the above table that agriculture formed the chief occupation, as was suggested above, the proportion of the Filipinos engaged in this group of occupations exceeding that of the United States, but falling short of the proportion in Cuba. The next occupation in importance in the Philippine Islands was that of manufactures, in which were engaged nearly one-third of the people, a proportion much larger than in the United States, and more than twice as great as in Cuba. The proportion engaged in personal and domestic service was slightly less than that in the United States, and much less than that in Cuba. Professions were not represented by any means as well as in either of these two countries with which comparisons are made. It will also be seen that in agriculture and manufactures nearly three-fourths of the wage-earners were occupied. Production was of vastly greater importance apparently than was distribution, there being ten persons engaged in the former to one in the latter.

The following table shows the proportions of the male and female wage-earners who were engaged in different classes of avocations, and with these, for purposes of comparison, are similar figures from the Twelfth Census of the United States:

OCCUPATION GROUP.	PHILIPPINE ISLANDS.		UNITED STATES.	
	Male.	Female.	Male.	Female.
Agricultural pursuits	57.8	8.8	39.6	18.4
Professional service	1.2	0.2	3.5	8.1
Domestic and personal service	21.4	13.7	14.7	39.4
Trade and transportation	7.5	7.4	17.9	9.4
Manufacturing and mechanical pursuits	12.1	69.9	24.3	24.7

From the above table it will be seen, first, that 57.8 per cent of all the male wage-earners were engaged in agriculture, that 21.4 per cent were engaged in domestic and personal service, and the small proportion of 12.1 per cent in manufactures. Of the female wage-earners,

on the other hand, nearly seven-tenths were engaged in manufacturing, while the proportion in other groups of avocations was smaller. These women were in the main employed in their homes in weaving cloths, mats, and hats, both for home use and for sale. Contrasting the column of males in the Philippines with a similar column for the United States, it is seen that the proportion engaged in agriculture was very much greater; the proportion engaged in manufactures was only half as great, and that of trade and transportation, very much less. On the other hand, the proportion of women employed in the fields was small compared with that for the United States, the proportion in domestic and personal service was but little more than one-third, while the proportion engaged in manufactures was nearly three times as great. This last recalls the conditions prevailing in the United States a century ago when the clothes of the family were made in the house, from the sheep's back to the completed garment.

The following table shows the proportion of each sex who were engaged in each group of occupations, gainful and nongainful:

OCCUPATION GROUP.	Male.	Female.
Agricultural pursuits	92.8	7.2
Professional service.....	91.1	8.9
Domestic and personal service.....	75.4	24.6
Trade and transportation.....	66.6	33.4
Manufacturing and mechanical pursuits.....	25.3	74.7
Nongainful	37.6	62.4

It appears from the above table that of the persons engaged in agriculture the overwhelming majority were men, and in most of the provinces the proportion is even greater than for the archipelago as a whole, since in only a very few, notably Cagayán and Isabela, do the women work in the fields.

More than nine-tenths of those engaged in the professions were males, the comparatively few women in this group of occupations consisting almost entirely of teachers.

In domestic and personal service three-fourths of those engaged were males. It is very unusual in the Philippines for women to be engaged in domestic service outside of their own homes.

In trade and transportation two-thirds were males and one-third females. It is very common in the Philippines for the women to keep little shops (*tiendas*) in the small towns and by the roadside.

On the other hand, in manufacturing three-fourths of those engaged were women. These included the vast number of women who were engaged in spinning and weaving cloth, hats, and mats (*petates*) in their own homes, where nearly all the manufacturing of the archipelago is carried on.

PROPORTION OF EACH SEX ENGAGED IN
EACH GROUP OF OCCUPATIONS AND
PROPORTION NOT OCCUPIED

In the following tables the wage-earners of the five grand groups are classified by age, the classification being expressed by percentages of the total number of wage-earners in each grand group. The wage-earners are classified also by sex and age in a similar manner:

Proportion of persons engaged in agricultural pursuits, in each age group.

AGE PERIOD.	Total.	Male.	Female.
10 to 14 years.....	3.6	3.4	5.8
15 to 24 years.....	24.0	23.6	29.6
25 to 34 years.....	26.6	26.7	24.8
35 to 44 years.....	19.6	19.9	16.6
45 to 54 years.....	12.7	12.7	12.4
55 to 64 years.....	9.4	9.5	7.8
65 years and over.....	4.1	4.2	3.0

Proportion of persons engaged in professional service, in each age group.

AGE PERIOD.	Total.	Male.	Female.
10 to 14 years.....	2.1	2.0	3.1
15 to 24 years.....	20.1	18.6	35.4
25 to 34 years.....	31.5	31.6	31.0
35 to 44 years.....	23.4	24.1	15.6
45 to 54 years.....	13.5	14.0	9.0
55 to 64 years.....	7.0	7.2	4.3
65 years and over.....	2.4	2.5	1.6

Proportion of persons engaged in domestic and personal service, in each age group.

AGE PERIOD.	Total.	Male.	Female.
10 to 14 years.....	7.0	5.8	10.6
15 to 24 years.....	31.4	30.1	35.5
25 to 34 years.....	26.5	27.9	22.4
35 to 44 years.....	16.3	17.0	14.3
45 to 54 years.....	9.6	9.5	9.4
55 to 64 years.....	6.4	6.7	5.6
65 years and over.....	2.8	3.0	2.2

Proportion of persons engaged in trade and transportation, in each age group.

AGE PERIOD.	Total.	Male.	Female.
10 to 14 years.....	2.9	2.3	4.0
15 to 24 years.....	26.2	25.7	27.4
25 to 34 years.....	32.4	35.8	25.6
35 to 44 years.....	20.5	21.0	19.4
45 to 54 years.....	10.7	9.4	13.3
55 to 64 years.....	5.5	4.4	7.7
65 years and over.....	1.8	1.1	2.6

Proportion of persons engaged in manufacturing and mechanical pursuits, in each age group.

AGE PERIOD.	Total.	Male.	Female.
10 to 14 years.....	3.6	2.9	3.9
15 to 24 years.....	30.6	20.7	34.0
25 to 34 years.....	27.5	27.5	27.6
35 to 44 years.....	17.9	21.4	16.7
45 to 54 years.....	11.1	13.3	10.3
55 to 64 years.....	6.7	9.6	5.6
65 years and over.....	2.6	4.6	1.9

The column relating to the total number of wage-earners is of interest chiefly in showing between what ages wage-earners in the different groups were drawn. More than one-half of those engaged in agricultural pursuits were between the ages of 15 and 35, and seven-tenths of them between 15 and 45. Domestic service drew from a somewhat younger class. Between 15 and 35 there were about 58 per cent of all, and there was a considerable proportion, much larger than in any other occupation group, of children under the age of 14.

Of those engaged in manufacturing 61 per cent were below the age of 35 and nearly 80 per cent below the age of 45. Of those engaged in trade and transportation 61.5 per cent were below the age of 35 and 82 per cent were less than 45 years of age. The professional class was composed of persons of a somewhat greater age. Under the age of 45 there were 77 per cent, 23 per cent exceeding that age.

The contrasts in the ages of the representatives of the two sexes were in some cases rather surprising. The males engaged in agricultural pursuits who were under the age of 25 formed 27 per cent of the whole number of males, while the corresponding proportion of the females was 35.4 per cent, an excess of females of 8.4 per cent. Women who worked in the fields were, on the whole, younger than the men engaged in the same avocation. The case was similar in the class of domestic and personal service. Here the males under 25 formed 35.9 per cent of all, while the females formed 46.1 per cent, an excess of females of 10.2 per cent. Again, in manufacturing the males under 25 formed 23.6 per cent and the females 37.9 per cent, an excess of females of 14.3 per cent. In trade and transportation there was an excess of females under the age of 25, although it was much less than in other cases. The excess of females in the professions was more marked than anywhere else, there being 20.6 per cent of males under 25 years, while the females formed not less than 38.5 per cent, the proportion of females being nearly double that of the males.

These differences between the sexes are probably explained by the fact that women before marriage are more generally engaged in gainful occupations than after marriage, their time then being taken up by housekeeping and the care of children.

The following tables show, by provinces and comandancias, the proportions of all wage-earners and of each sex engaged in each of the five grand groups of occupations:

Proportion of all wage-earners (10 years and over) engaged in agricultural pursuits to all wage-earners, by provinces and comandancias.

Among the Filipinos there is little specialization. Few among them, either men or women, devote themselves exclusively to one occupation. A man works part of the day at farming and devotes part of the night to fishing, and whether he reported himself to the census as a farmer or a fisherman was very much of an accident. The same thing holds throughout quite a range of avocations, especially among those of the lower classes. Hence many of the figures shown in the following table are of little consequence, and, excepting in the professions, they become of less and less significance as the numbers diminish.

Occupations were returned upon the schedules by the enumerators in the greatest possible variety. Altogether, the schedules contained between twelve and fifteen hundred different designations. In very many cases the different designations were synonymous, or differed from one another merely to express difference in sex. The combination of these synonyms reduced the number greatly, and finally a list of 224 occupations was adopted. When these were tabulated it was found that many of the occupations had very few representatives, so few that it seemed inadvisable to give them separately. In other cases the numbers given were plainly too small to properly represent the industry.

The following is an illustration of this: An attempt was made to classify the different kinds of merchants in accordance with the character of the goods dealt in; in other words, to classify them as dealers in cigars, shoes, hats, rice, lumber, etc. It was found, however, that three-fourths of the merchants were not classified at all, but returned

simply as merchants. To publish as a fact, therefore, that there was a certain number of dealers in shoes, cigars, rice, etc., when it was perfectly well known that the number given was only a fraction of the true number, the remainder being grouped under the head of simply "merchants," would have been misleading. It was therefore decided to cease all attempts to classify merchants, but to publish them simply under the general head of "merchants."

An attempt was made to separate the Protestant clergymen under the head of "clergymen" from the Spanish "friars" and the native "padres." This, however, was not entirely successful, for there were found under the head of "clergymen" not only white but brown persons, and, similarly, under the head of "friars," while under the designation "padres" were found whites. Under these circumstances it seemed best to combine the three classes, since in the classification in Table 59 the padres are separated by the color classification and also the friars, with the exception of perhaps a score of American protestants.

By making these and other similar combinations the number of occupations presented in the table for the archipelago was reduced to 135. In the portion of this table relating to the provinces the number of occupations represented is necessarily very much less, inasmuch as comparatively few occupations were reported in any one province, owing to the small population.

The following table shows the number of those engaged in the various occupations, and the proportion which they bore to the total number of wage-earners:

OCCUPATION.	Number.	Per cent of total.	OCCUPATION.	Number.	Per cent of total.

These occupations include practically all the wage-earners.

Farmers and farm laborers constituted more than two-fifths of all wage-earners. The proportion was larger than that in the United States (34.5 per cent). In Cuba and Porto Rico it is impossible to separate the farm laborers from other laborers, and the total of both classes is given. In the Philippine Islands 12.6 per cent, or about one-eighth of all the wage-earners, were day laborers. Adding this per cent to that of farmers and farm laborers the sum is comparable to similar figures for Cuba and Porto Rico. In the Philippines 53.3 per cent of the wage-earners were farmers or laborers, a proportion considerably less than that of Cuba (57.8 per cent), and still less than that of Porto Rico (68.2 per cent). Farm laborers in the Philippines were almost entirely males, there being 19 males to 1 female engaged in this occupation. Among the day laborers the proportion of males and females was 89 to 11.

Occupations in the Philippines are affected greatly by the fact that these islands produce a great quantity and variety of textile fibers. The result of this is that weaving and spinning of cloth, mats, hats, bags, etc., is a large industry, and is confined almost entirely to the

women, carried on by hand or with the simplest kind of looms in the dwellings. Of all the wage-earners, 18.8 per cent, or more than one-sixth, were engaged in spinning and weaving. In addition to that seven-tenths of 1 per cent were engaged in making mats, four-tenths of 1 per cent in making hats, and an equal per cent in making bags. All of these were women. There are no industries comparable to these in Cuba or Porto Rico, or even in the United States, where such work is done by machinery in factories.

Merchants constituted 4.5 per cent of the producing class. This proportion is less than in Cuba (7.6 per cent), but greater than in the United States (2.9 per cent), or in Porto Rico (2.8 per cent). It is a curious fact that as regards sex, female merchants were more numerous than males, the proportion being 46 males to 54 females.

The extent to which the Chinese entered into the mercantile life of the country is shown by the fact that 11 per cent of the merchants were Chinamen, and one-third of all the Chinese in the islands were merchants.

Of the producing class, 3.8 per cent were returned as fishermen. This probably is a very poor index of the extent or importance of the fishing industry, for nearly everybody who lives near the coast is a fisherman during part of the time. Of the total number returned as fishermen, nineteen-twentieths were males.

Launderers and laundresses formed 2.2 per cent of the wage-earners, a proportion greater than in the United States, where it was but 1.3 per cent, but less than in Cuba (3.6 per cent), and very much less than in Porto Rico (5.4 per cent). In the Philippines persons engaged in this avocation were in the proportion of 92 women to 8 men.

Seamstresses and dressmakers formed 2.2 per cent of the wage-earners, a proportion greater than in either the United States (1.7 per cent), Cuba (1.4 per cent), or Porto Rico (1.8 per cent).

In spite of the fact that the higher classes, at least, have numerous servants, the proportion of those engaged in this avocation was very small (1.8 per cent) as contrasted with 5.3 per cent in the United States, 6.7 per cent in Cuba, and 8.2 per cent in Porto Rico. In this avocation, contrary to the conditions that prevail in the United States, men largely outnumbered women, there being 58 men to 42 women.

The proportion of carpenters was small, being less than in the United States (2.1 per cent), in Cuba (2.3 per cent), or Porto Rico (1.6 per cent). As was the case with household servants, the majority of the cooks in the Philippines were males, there being 62 of that sex to 38 females.

Sailors formed eight-tenths of 1 per cent of all wage-earners, as contrasted with two-tenths of 1 per cent in the United States.

Of the police and constabulary, out of a total number of 20,935, 20,194, or not less than 97 per cent, were of the brown race, nearly all

the remainder being Americans. The police and constabulary of the islands, considered in point of strength, may be compared with the police and army in the United States. In the Philippines they formed seven-tenths of 1 per cent, while in the United States they formed six-tenths of 1 per cent.

Tailors were relatively a little more than half as numerous in the Philippines as in the United States. Salesmen formed a much smaller proportion of the wage-earners than in the United States, where they were 2.1 per cent of all, in Cuba (2.3 per cent), or in Porto Rico (1.5 per cent).

So far as the number of operatives is an index, the cigar and cigarette industry in the islands was about on a par with that of the United States, the proportion of wage-earners being equal in both countries and much less than in Porto Rico (1.2 per cent), and far less than in Cuba (3.9 per cent). The operatives in the Philippines were as to sex in the proportion of 29 males to 71 females.

Of the total number of physicians reported above, 1,326 were reported as of the brown race.

Of the total number of clergymen reported (1,153), 677 were returned as of the brown race, and probably consisted entirely, or nearly so, of the native priests or padres. The whites numbered 470, and excepting, perhaps, a score of Protestant ministers, they were friars. Of these, 320, or more than two-thirds, were found in Manila, the remaining 150 being scattered about in the provinces.

Of the lawyers, whose total number was 862, 727, or five-sixths, were of the brown race. Of the accountants and bookkeepers, whose number was returned as 457, 148 were returned as brown, 209 as yellow, and 78 as white. It is well known that Chinamen are employed in this capacity in the Philippines, as elsewhere in the East.

The total number of persons reported as teachers was 5,362. The number of teachers employed in the schools of the islands was reported upon the school schedules as 5,925, a difference of 563, the latter being about 10 per cent greater.

The following table classifies, by sex and color, the teachers as they were found upon the two schedules, developing the differences between them:

TEACHERS.	Population schedule.	School schedule.
Total.....	5,362	5,925
Male.....	3,494	3,810
Female.....	1,868	2,115
Brown.....	4,468	4,898
Mixed.....	80	
Yellow.....	11	5
White.....	800	1,022
Black.....	3	

In every case, excepting the few who were returned as mixed, yellow, and black, the numbers were less upon the population than upon the school schedule. These differences are to be accounted for by the fact that some of the teachers had other occupations besides teaching, to which they devoted part of their time, and in which occupation they reported themselves. For instance, most of the Spanish teachers were friars and were so reported upon the population schedules, and not as teachers. If the Spanish friars who acted as teachers be subtracted from the total number of white teachers reported upon the school schedules there remain 788 American teachers, a number closely comparable with the number of white teachers reported upon the population schedules.

The number of women who reported themselves as prostitutes was 476, nearly all of whom were in Manila. Of these, 75 were white, nearly all the countries of Europe being represented, besides the United States. Two hundred and sixty, or more than half, were yellow, practically all of whom were Japanese, and only 141, or 1 in 25,000 of the female population of the islands, were Filipinos. It is rather extraordinary that in this Malay archipelago seven-tenths of all the prostitutes were from foreign lands, a fact which speaks volumes for the chastity of the Filipinos. Elsewhere in this report it is shown that among the Filipino consensual marriages are not at all uncommon, but a sharp line seems to be drawn between this more or less permanent relation and promiscuous intercourse.

The following table shows the proportion of people of the brown race who were engaged in each of the principal occupations followed by that race:

OCCUPATION.	Per cent.	OCCUPATION.	Per cent.
Farmers and farm laborers	41.4	Launderers.....	2.2
Spinners and weavers	19.1	Seamstresses	2.2
Day laborers	12.7	Servants.....	1.8
Merchants	4.1	Carpenters	1.2
Fishermen	3.9		

More than two-fifths of the brown people were engaged in agriculture, either as farmers or farm laborers, nearly one-fifth as spinners and weavers, and about one-eighth as day laborers, while only about one twenty-fifth part of them were merchants, a proportion only a little greater than that of fishermen.

Separating the brown wage-earners by sex, much that is of interest is developed. It is shown in the two following little tables—the first relating to male wage-earners and the second to female wage-earners:

OCCUPATION OF MALES.	Per cent.	OCCUPATION OF MALES.	Per cent.
Farmers and farm laborers	58.5	Carpenters	1.8
Day laborers	17.3	Servants	1.6
Fishermen	5.7	Constabulary and police	1.0
Merchants	2.4	Sailors	1.0

OCCUPATION OF FEMALES.	Per cent.	OCCUPATION OF FEMALES.	Per cent.
Spinners and weavers	55.3	Servants	2.2
Farmers and farm laborers	8.8	Matmakers	2.0
Merchants	7.2	Hatmakers	1.2
Seamstresses	6.4	Cooks	1.1
Laundresses	6.0	Bagmakers	1.1

From the first of these tables it appears that nearly three-fifths of the brown males were engaged in agriculture, about one-sixth of them were day laborers, and a little more than 1 in 20 were fishermen, while the merchants formed only 2.4 per cent of all. On the other hand, of the female wage-earners eleven-twentieths were spinners and weavers, only about one-twelfth were engaged in agriculture, while more than 7 per cent were merchants, a proportion three times as great as in the case of the males. Seamstresses formed 6.4 per cent of all, and laundresses 6 per cent.

The following table, showing the distribution of the yellow wage-earners among the principal occupations, differs widely from the corresponding table given for the brown people:

OCCUPATION.	Per cent.	OCCUPATION.	Per cent.
Merchants	33.9	Messengers	3.3
Salesmen	14.7	Servants	2.5
Day laborers	11.6	Clerks	2.6
Cooks	7.2	Packers and shippers	1.7
Carpenters	6.2	Bakers	1.4
Shoemakers	3.4	Blacksmiths	1.2

More than one-third of the wage-earners of the yellow race were merchants, and nearly 15 per cent were salesmen, making a total of nearly one-half who were engaged in trade, which contrasts strongly with the proportion of the brown people, which is only 4.1 per cent. The proportion of the day laborers was not markedly different from that of the brown people. While cooks were but slightly represented among the brown people, they formed over 7 per cent of the yellow people. A notable proportion of the yellow people was engaged in the manufacturing trades, which group of occupations was but slightly

represented among the brown people. The proportion of farmers and farm laborers was less than 1 per cent.

The following table shows the occupations principally followed by people of mixed descent, with the proportion of all wage-earners engaged in each:

OCCUPATION.	Per cent.	OCCUPATION.	Per cent.
Merchants.....	21.0	Machinists.....	2.0
Farmers and farm laborers.....	18.2	Government officials.....	1.8
Clerks.....	7.6	Constabulary and police.....	1.6
Salesmen.....	6.9	Launderers.....	1.3
Seamstresses.....	6.9	Servants.....	1.2
Day laborers.....	4.3	Physicians and surgeons.....	1.1
Spinners and weavers.....	4.3	Cigarmakers.....	1.0
Teachers.....	2.4	Lawyers.....	1.0

The first thing to attract the attention is the fact that a much larger number of occupations was represented by these people than either among the brown or the yellow people; thus, the number of occupations containing at least 1 per cent of all the wage-earners was in the case of the brown people as a whole only 9, in the yellow people 12, while in the mixed it was 16. The proportion of merchants and salesmen is midway between that of the brown people and of the yellow people, also that of farmers and farm laborers. The proportion of day laborers was smaller than in either of the other two peoples, and the members of the professional class were sufficiently numerous to be represented here. Indeed, there is every indication that those of mixed blood occupied, on the average, a higher position in life than either the brown or the yellow people.

The following table shows the distribution of the white wage-earners among the leading occupations:

OCCUPATION.	Per cent.	OCCUPATION.	Per cent.
Clerks.....	18.5	Government officials.....	3.4
Merchants.....	17.3	Sailors.....	2.9
Salesmen.....	8.0	Machinists.....	2.2
Teachers.....	7.1	Physicians and surgeons.....	1.4
Constabulary and police.....	5.9	Carpenters.....	1.3
Clergymen.....	4.2	Engineers and firemen.....	1.2
Cowboys.....	3.9	Draymen.....	1.1
Farmers and farm laborers.....	3.4	Blacksmiths.....	1.0

The proportion of those engaged in agriculture was very small, those engaged in trade was large, although not as large as among the yellow people. The teachers were naturally proportionally much more numerous, while the professional men formed a very important element. The number of occupations represented here was the same as among those of mixed blood.

The following table shows the proportion in each of the leading occupations of the people of the black race:

OCCUPATION.	Per cent.	OCCUPATION.	Per cent.
Farmers and farm laborers	18.1	Carpenters	4.3
Coachmen	14.2	Salesmen	4.0
Day laborers	11.1	Cooks	3.2
Clerks	9.1	Constabulary and police	2.2
Weavers and spinners	6.1	Bartenders	2.0
Merchants	5.7	Laundress	1.9
Servants	4.7	Draymen	1.3

Farmers and farm laborers were the most numerous, though not by any means as numerous proportionally as among the brown people. Then followed coachmen and day laborers. Merchants and salesmen were not a large class among these people.

GENERAL TABLES

¹ The subdivisions of Manila city are districts and not municipalities. The population of vessels in the harbor is given as a separate total.

² Subprovince of Tayabas.

TABLE 16.—Civilized population, classified by age groups, giving the number under 1 year, under 5 years, under 10 years, and of school age (5 to 17 years), by sex, and the number of males of militia age (18 to 44 years), and of voting age (21 years and over), by municipalities—Continued.

The population of vessels in the harbor is given as a separate total.

The subdivisions of Manila city are districts and not municipalities.

^a Subprovince of Tayabas.

TABLE 42.—Civilized population 10 years of age and over, classified by literacy and sex, by municipalities—Continued.
